Department of Defense Appropriations Act, 2020

Weapons Procurement, Navy

For construction, procurement, production, modification, and modernization of missiles, torpedoes, other weapons, and related support equipment including spare parts, and accessories therefore; expansion of public and private plants, including the land necessary therefore, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to approval of title; and procurement and installation of equipment, appliances, and machine tools in public and private plants; reserve plant and Government and contractor-owned equipment layaway, \$4,332,710,000 to remain available for obligation until September 30, 2022.

FY 2020 Overseas Contingency Operations funding can be separated into the following categories:

- OCO for Direct War Costs (\$64,940,000): Direct War costs are those combat or direct combat support costs that will not continue to be expended once combat operations end at major contingency locations.
- OCO for Enduring Requirements (\$32,526,000): OCO for Enduring Requirements are enduring in-theater and in-CONUS costs that will likely remain after combat operations cease, and have previously been funded in OCO.
- OCO for Base Requirements (\$4,235,244,000): OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

Description:

FY 2020 funding totals include \$0.0M for Base and \$1,177.251M for Overseas Contingency Operations (OCO); of which \$1,177.251M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

The TRIDENT II (D5) missiles will be carried on OHIO CLASS Fleet Ballistic Missile Submarines through 2042 and will be the initial payload for the COLUMBIA Class Fleet Ballistic Missile Submarines. The D5 Life Extension (D5LE) program will ensure that the United States continues to maintain a highly survivable strategic deterrent well into the 21st century. The TRIDENT II missile (1) enhances fleet ballistic missile submarine survivability as it increases the sea launched ballistic missile range at full payload to exploit the total patrol area available to the TRIDENT submarine, (2) minimizes total weapon system costs as it has increased the sea launched ballistic missile payload to the level permitted by the size of the TRIDENT submarine launch tube, thereby allowing mission capability to be achieved with fewer submarines, and (3) has added an efficient hard target kill capability to the sea launched ballistic missiles.

D5 Life Extension Costs Include:

Production Support: Funding supports D5 Life Extension (D5LE) system integration, D5LE tooling and test equipment, D5LE Flight Test Instrumentation and Analysis, support for the new Test Missile Kits (TMK's), and D5LE end of production costs.

Guidance Hardware: Includes procurement of subcomponents necessary for a complete Guidance System which consists of an Inertial Measurement Unit (IMU) and Electronics Assembly (EA). Within the IMU and EA there are numerous sub-components which are included in this cost element including Guidance Circuit Card Assemblies (CCA), Guidance Accelerometer Sensors (PIGA), Interferometric Fiber Optic Gyros (IFOG), Detector Package Assemblies (DPA) and Mk6 LE Electronic Part Sets (LEEP) and associated production support.

Fleet Return Missile Electronic SPALT Kits: Includes procurement of the 4 Missile Electronics Packages and associated production support in order to extend the life of the D5 Missile to align with the Ohio Class life.

Joint Fuze Sustainment: Includes the procurement of the Arming Fuzing & Firing (AF&F) kits.

 Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:
 Funding in the TRIDENT II Mods line is required to continue the procurement of TRIDENT II missiles and currently supports the life-extension of the D5 missile.

The FY 2020 request of \$647.522 million for the D5 Life Extension (D5LE) Program supports the production of the redesigned guidance system and missile electronics packages, which must be replaced to support the extended service life of the Ohio Class Submarines. FY 2020 funding procures missile electronic and guidance SPALT kits as well as other critical components required to support the extended SSBN hull life for a 14 SSBN TRIDENT II program. Also included is the procurement of the Arming Fuzing & Firing (AF&F) kits.

Increases/Decreases from FY 2019 to FY 2020 include:
 The Joint Fuze Sustainment budget line depicts a quantity increase from 30 in FY 2019 to 190 in FY 2020, however there is also a significant decrease in unit cost. The unit cost decrease is more a result of a decrease in life of part buys (LOPB) and commercial off the shelf items required to support assembly, rather than the increased quantity of AF&F's. Additionally, FY 2019 funding supports full rate production of heterojunction bipolar transistors, application specific integrated circuits and ignitors, all required to support full assembly of the AF&F in FY 2020.
 An increase in Production Support for Test Missile Kit (TMK) procurements. TMK's are necessary for flight testing and the procurement baseline is driven by the D5LE flight test schedule. The Test Missile Kit (TMK) is set of electronic packages, antennas, and ordnance devices that are installed on a tactical missile to convert it to a test missile. The TMK consists of three subsystems; flight termination, tracking, and telemetry. The flight termination subsystem provides the capability to destruct the missile for range safety. The tracking subsystem provides real time range and velocity for range safety and trajectory data for post flight analyses. The telemetry subsystem provides in-flight data for flight performance analysis. In FY 2019 the funding profile was unusually low due to the UK procuring the majority of the TMK's (US only procured 4), however in FY 2020 the US resumes the normal procurement baseline of 15 TMK's, in line with the FY 2018 profile.

The FY 2020 request of \$529.729 million for Operating and Support Costs funds efforts associated with the sustainment of TRIDENT II (D5) missiles to include system integration efforts, replacement of aging rocket motors, refreshes and replacement of D5 legacy tooling and test support equipment, Supportability Mods/Strategic Programs Alteration (SPALT) Insertion, Warhead Components and Shape Stable Nose Tip (SSNT).

Increases from FY 2019 to FY 2020 include:
 An increase in Warhead Components for 4 additional Joint Test Assemblies (JTA's) to support warhead Retrofit Evaluation System Testing.
 An increase in Shape Stable Nose Tip (SSNT) to support the first flight test which is necessary to evaluate the performance of the developmental hardware of the SSNT flight test body.
 An increase in Tooling Test Support Equipment including but not limited to:
 -Missile Service Unit (MSU) Refresh which consists of procurement, production and Strategic Weapon Facility (SWF) integration support of 3 units. The MSU allows for reconfiguration of the re-entry body on the submarine itself for flight testing (missile doesn't have to be offloaded off the submarine)
 -The procurement of three Kneel Down Transporters (KDT's) which are required to transport all up missiles and 1st stage motors. Both the missile and the 1st stage motors require special vehicles to transport them from various buildings/locations on the Strategic Weapon's Facilities (SWF's) due to their weight.

Exhibit P-40, Budget Line Item Justification: PB 2020 Navy		Date: March 2019
Appropriation / Budget Activity / Budget Sub Activity: 1507N: Weapons Procurement, Navy / BA 01: Ballistic Missiles / BSA 2: Modification of Missiles		P-1 Line Item Number / Title: 1250 / TRIDENT II Mods
ID Code (A=Service Ready, B=Not Service Ready): A	Program Elements for Code B Items: N/A	Other Related Program Elements: 0603561N, 06030570N, 09012111N, 0101221N
Line Item MDAP/MAIS Code: N/A		
<p>-Test Missile Kit System Acceptance Checkout Equipment (KSACE) refresh. The KSACE performs production acceptance testing of TMK's prior to test flights. The refresh also includes all spare parts for sustainment of the test console.</p> <p>-Command Sequencer and Power Distribution Unit Test console refresh. This test console performs production acceptance testing on both the Command Sequencers (CS) and the Power Distribution Unit's (PDU). The CS is one of the 4 Missile Electronics Packages being refreshed for D5 Life Extension and The PDU distributes power from one single battery to all the electronics on the Missile.</p> <p>An increase in End of Production Missile and Guidance Costs for initial shutdown efforts associated with full Guidance production line shutdown commencing in FY 2021.</p> <p>An increase in Rocket Motor and PBCS Other Costs for:</p> <p>-2 Additional Performance Evaluation Tests</p> <p>- The FY 2019 funding profile was lower due to the increased UK procurement profile and the UK being responsible for a higher portion of shared costs, however in FY 2020 the UK procurement profile is reduced and the US resumes the normal level of shared costs.</p> <p>An increase in Warhead Components for 4 additional Joint Test Assemblies (JTA's) to support Warhead Retrofit Evaluation System Testing.</p>

^(t) indicates the presence of a P-5a

Footnotes:

(1) The Joint Fuze Sustainment budget line depicts a quantity increase from 30 in FY 2019 to 190 in FY 2020, however there is also a significant decrease in unit cost. The unit cost decrease is more a result of a decrease in life of part buys (LOPB) and commercial off the shelf items required to support assembly, rather than the increased quantity of AF&F's. Additionally, FY 2019 funding supports full rate production of heterojunction bipolar transistors, application specific integrated circuits and ignitors, all required to support full assembly of the AF&F in FY 2020.

(2) An increase in Production Support for Test Missile Kit (TMK) procurements. TMK's are necessary for flight testing and the procurement baseline is driven by the D5LE flight test schedule. The Test Missile Kit (TMK) is set of electronic packages, antennas, and ordnance devices that are installed on a tactical missile to convert it to a test missile. The TMK consists of three subsystems; flight termination, tracking, and telemetry. The flight termination subsystem provides the capability to destruct the missile for range safety. The tracking subsystem provides real time range and velocity for range safety and trajectory data for post flight analyses. The telemetry subsystem provides in-flight data for flight performance analysis. In FY 2019 the funding profile was unusually low due to the UK procuring the majority of the TMK's (US only procured 4), however in FY 2020 the US resumes the normal procurement baseline of 15 TMK's, in line with the FY 2018 profile.

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

(†) indicates the presence of a P-5a

Footnotes:

(3) An increase in Warhead Components for 4 additional Joint Test Assemblies (JTA's) to support Warhead Retrofit Evaluation System Testing.

(4) An increase in Shape Stable Nose Tip (SSNT) to support the first flight test which is necessary to evaluate the performance of the developmental hardware of the SSNT flight test body.

(5) An increase in Tooling Test Support Equipment including but not limited to: -Missile Service Unit (MSU) Refresh which consists of procurement, production and Strategic Weapon Facility (SWF) integration support of 3 units. The MSU allows for reconfiguration of the re-entry body on the submarine itself for flight testing (missile doesn't have to be offloaded off the submarine). -The procurement of three Kneel Down

Exhibit P-5, Cost Analysis: PB 2020 Navy		Date: March 2019
Appropriation / Budget Activity / Budget Sub Activity: 1507N / 01 / 2	P-1 Line Item Number / Title: 1250 / TRIDENT II Mods	Item Number / Title [DODIC]: 2 / TRIDENT II Mods -Operating and Support Costs
ID Code (A=Service Ready, B=Not Service Ready) :		MDAP/MAIS Code:
<p>Transporters (KDT's) which are required to transport all up missiles and 1st stage motors. Both the missile and the 1st stage motors require special vehicles to transport them from various buildings/locations on the Strategic Weapon's Facilities (SWF's) due to their weight. -Test Missile Kit System Acceptance Checkout Equipment (KSACE) refresh. The KSACE performs production acceptance testing of TMK's prior to test flights. The refresh also includes all spare parts for sustainment of the test console. -Command Sequencer and Power Distribution Unit Test console refresh. This test console performs production acceptance testing on both the Command Sequencers (CS) and the Power Distribution Unit's (PDU). The CS is one of the 4 Missile Electronics Packages being refreshed for D5 Life Extension and The PDU distributes power from one single battery to all the electronics on the Missile.</p> <p>⁽⁶⁾ An increase in End of Production Missile and Guidance Costs for initial shutdown efforts associated with full Guidance production line shutdown commencing in FY 2021.</p> <p>⁽⁷⁾ An increase in Rocket Motor and PBCS Other Costs for: -2 Additional Performance Evaluation Tests - The FY 2019 funding profile was lower due to the increased UK procurement profile and the UK being responsible for a higher portion of shared costs, however in FY 2020 the UK procurement profile is reduced and the US resumes the normal level of shared costs.</p>

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

FY 2020 funding totals include \$0.0M for Base and \$7.142M for Overseas Contingency Operations (OCO); of which \$7.142M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

Funding for Missile Industrial Facilities provides for capital maintenance projects at Navy-owned Naval Industrial Reserve Ordnance Plants (NIROPS) at Sunnyvale and Santa Cruz, California; Bacchus, Utah; Denver, Colorado and Space Coast Florida in support of the Fleet Ballistic Missile program. The Bacchus, Utah, ATK facility alone consists of 583 acres, over 130 buildings and over 13 miles of road. The Sunnyvale, California facility consists of 49 acres of land and 10 buildings and the Santa Cruz, California facility consists of 271 acres of land and 29 buildings.

Justification:
As NIROP buildings are vital to D5 motor production, they must be maintained in an operational state until the D5 missile retirement. Most buildings are already over 50 years old and have exceeded their useful life. Safety related maintenance projects were originally deferred when the Department did not have a program of record to remotor the D5 missile to support its extended deployment. Subsequently, the Department approved and funded the re-motoring of D5 missiles. Additional repairs and upgrades are necessary to ensure NIROP buildings are properly maintained because of this significant extension of motor procurement. Incidents that stress the need for additional funds include: a leak in the fire branch line which left a few energetic buildings without fire protection, failure of an exhaust fan which halted operations until the unit was replaced, failure of a pneumatic valve which halted HMX production, and a failure in the liquid nitrogen pump system which shut down hardware testing. Projects planned in FY 2020 include modifications and rehabilitation of civil works, non-severable equipment, and real property. Among these projects are roof replacements, floor replacements, power line refurbishments, lighting system replacements in 24 buildings, upgrades and replacements to boiler and electrical subsystems, water supply replacements and general facilities maintenance.

Description:

FY 2020 funding totals include \$0.0M for Base and \$386.73M for Overseas Contingency Operations (OCO); of which \$386.73M and 90 quantity is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

The Block V is a modernized TACTOM missile which includes Navigation Communications (NAV/COMMs) upgrade.

Tomahawk provides an attack capability against fixed and mobile/moving targets, and can be launched from both surface ships (RGM) and submarines (UGM). Tomahawk consists of the following variants: (1) RGM/UGM-109C, Land Attack Conventional; (2) RGM/UGM-109D, Land Attack Submunition Dispenser; (3) RGM/UGM-109E, Tactical Tomahawk.

The Block IV/V Tactical Tomahawk (TACTOM RGM/UGM-109E) preserves Tomahawk's long-range precision-strike capability while significantly increasing responsiveness and flexibility. TACTOM is capable of in-flight retargeting, the ability to loiter over the battlefield, in-flight missile health and status monitoring, and battle damage indication. Other Tomahawk Weapon System functionality includes rapid mission planning and execution via Global Positioning System (GPS) onboard the launch platform and improved anti-jam GPS.

Characteristics and dimensions (approximate):

Weight (with booster and capsule) (UGM-109): 4,300 pounds

Weight (with booster and canister) (RGM-109): 4,300 pounds

Length (with booster): 20.5 feet

Wing Span: 8.6 feet

Cruise Speed: High Subsonic

*Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:
 FY 2020 funding supports the procurement of 90 new BLOCK V TACTOM and the start of the Recertification phase of the program with the induction of Block IV assets for modification into the Block V configuration with the installation of 112 NAVIGATION/COMMUNICATIONS (NAV/COMMs) Kits, formerly known as Anti-Access Area Denial (A2AD) modernization kits. Funding also supports the increased procurement of TACTOM NAV/COMMs modernization kits, from 112 in FY 2019 to 156 in FY 2020, support equipment and associated support.

 FY 2020 includes the procurement of Maritime Strike Tomahawk (MST) as a rapid deployment capability which includes seeker kit hardware, assemblies/subassemblies, packaging and storage.

 The Next Generation Land Attack Weapon (NGLAW) Analysis of Alternatives (AoA) findings have prompted the Navy to restart the TACTOM Production line in FY 2020. This strategy change necessitates the need to leverage budgeted Production Shutdown funds for the purpose of Production Transition, enabling the transformation of the TACTOM line, tooling, test equipment, and System Integration Labs for concurrent production of TACTOM missiles and TACTOM missile re-certifications. The Navy will conduct further analysis to determine if TACTOM production will continue beyond FY 2021.

(t) indicates the presence of a P-5a

Footnotes:

- (1) FY 2018 funding and quantity reflect the Enacted amounts. Unit Cost increase from FY 2018 to FY 2020 due to capability upgrades associated with Block V configuration.
- (2) FY 2018 funding and quantity reflect the Enacted amounts. Unit cost increase from FY 2018 to FY 2020 due to buying canisters directly from the Vendor in FY 2020. FY 2018 canisters were refurbished from expended canisters and purchased parts from qualified supplier.
- (3) Funding reflects required Production obsolescence mitigation including avionics, electrical, and structures bill of material development, and obsolescence ECP forecasting in order to support the extended end of service date.
- (4) Production Line Shutdown cost element has been renamed to Production Line Transition. Name change is due to The Next Generation Land Attack Weapon (NGLAW) Analysis of Alternatives (AoA) findings that have prompted the Navy to restart the TACTOM Production line starting in FY 2020. This strategy change necessitates the need to leverage budgeted Production Shutdown funds for the purpose of Production Transition, enabling the transformation of the TACTOM production line, tooling, test equipment, and System Integration Labs for concurrent production of TACTOM missiles and TACTOM missile re-certifications starting in FY 2020 and continuing in FY 2021. Production Line Transition costs totaling \$20.164M in FY 2019 is required for the transitioning of the Tactical Tomahawk from the production to the recertification line. It will include disposition of tooling at Raytheon Missile Systems, and multiple vendors including primary vendors integral to the recertification of the TACTOM. Capital improvements transitioning the System Integration Lab (SIL) and Production Floor for concurrent Production/Recertification starting in FY 2020.
- (5) Production Engineering Support is required in FY 2020 to support the delivery of missiles across the funded delivery period as well as additional support required for Block V related capabilities. Efforts include warhead energetics, airframe engineering competencies, Production Acceptance Testing integrated logistics support.
- (6) Systems Engineering Support is required in FY 2020 to support the delivery of missiles across the funded delivery period as well as additional support required for Block V related capabilities. Efforts include warhead energetics, airframe engineering competencies, Production Acceptance Testing integrated logistics support.
- (7) Support Equipment in FY 2020 is for the procurement of Mid-Body Range Safety System (MRSS) required to conduct TACTOM BLK IV/V flight testing, and associated test equipment obsolescence and cyber security upgrades necessary for software development, MRSS kit production and TACTOM BLK IV/V missile conversion into a flight test missile. Increases in FY 2020 are due to the requirement to maintain Flight Test tempo that is supportive of capability development, missile inventory surveillance, fleet proficiency, and tactics development.

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Footnotes:

⁽⁸⁾ MSR/MAX production rates are based on canister contract constraints. Multiple canister configurations are manufactured at BAE in Aberdeen, South Dakota for multiple customers in the same facility. The family includes MK7, MK8, MK13, MK15, MK21 and MK236. As a result of the broad number of customers, the demand level is sufficient for the industrial base. There is no specific MSR/MAX for the MK14 TACTOM canister. MSR/MAX would be a factor of the entire family of canisters. MSR for TACTOM missiles is 90 when executing concurrently with the Recertification Program.

Description:

The Tactical Tomahawk (TACTOM) Navigation Communication Modernization kits (NAV/COMMs) formerly known as Anti-Access Area Denial (A2AD) Modernization kits consist of the Integrated Single Box Solution (ISBS) radio, two new antennas and associated cabling, a new mid-body cover, and changes to the aft-body structure and aft-body cover. The ISBS radio is replacing the existing Satellite Data Link Terminal (SDLT); and the new Ultra High Frequency (UHF) antenna is replacing the existing UHF antenna. A second antenna is being added to the missile to accommodate a second frequency band. The changes to the missile are driven by the obsolescence of the SDLT hardware and the obsolescence of the UHF Demand Assigned Multiple Access (DAMA) communications infrastructure that is being phased out of service. Tomahawk Weapon System Baseline IV, Operational Requirements Document (SN 641-76-04), Revision 3, 11 August 2004.

As part of the Recertification (ACAT II) program, all Block IV TACTOMs will be updated to the modernized Block V configuration with the incorporation of NAV/COMMs kits starting in FY 2020. Recertification inventory objective is 3992.

The TACTOM service life for RGM109E and UGM109E Block IV/V Tomahawk cruise missiles is 30 years with a 15 year deployment and recertification cycle. The TACTOM Recertification program includes FY 2019 funding associated with the non-recurring engineering across the prime contractor and sub-tiered vendor base required for the Stand-up/Support Equipment upgrades of the Tactical Tomahawk recertification line. Stand-up/Support Equipment upgrades are inclusive of updating, refurbishing, and replacing existing Tooling and Test Equipment and Systems Integration Labs (SILs) which have been in existence from the early 1980s (Tomahawk Block II/III Depot and Production lines) along with the unique Block IV Tactical Tomahawk Tooling and Test Equipment procured in FY 2003/2004. All of these activities need to be completed to verify and validate the recertification line, in preparation for recertification inductions starting in FY 2020; and serve as an enabler for executing Recertification and Block V Production concurrently in FY 2020. In FY 2019 five TACTOM missiles will go through the end-to-end recertification process, formally 'Proving-In' recertification work instructions, the Raytheon line and sub-vendor recertification activities..

The yearly recertification profile will limit missile backlog within the Fleet due to the expiration of life limiting components. This activity includes the costs associated with the Raytheon labor, vendor recertification of specific components (i.e. mechanical and electrical components), recertification of the MK 45 submarine capsule, missile consumables, fuze recertification and fuel. Recertification is planned to occur concurrently with installation of NAV/COMMs Modernization Kits, which will replace the existing SDLT radio and antenna.

Maritime Strike Tomahawk (MST) is a Rapid Deployment Capability which includes seeker kit hardware, assemblies/subassemblies, packaging and storage. Seeker kit hardware procurement includes the sensors, nosecone, ULTRA processor, cooling pump and plumbing, bulkhead, power and signal harnesses, power supply, plumbing and electrical chase insulators, telemetry unit, wiring, magnet generator, and alternator voltage control converter. Includes modifying existing missile infrastructure to accept/install seeker kit components and assemblies into a modernized Block V missile.

Footnotes:
⁽⁹⁾ Learning curve, quantity variations affecting economy of scale, and escalation rates account for the variation in Recertification kit costs across the FYDP. FY 2019 will be the initial Recertification lot procurement.
⁽¹⁰⁾ FY 2018 funding and quantity reflect Enacted amounts. Only five NAV/COMMs kits were procured in FY 2018, in support of Recertification 'prove-in', which slipped to FY 2019.

ID Code (A=Service Ready, B=Not Service Ready) :		MDAP/MAIS Code:
<p>(11) Learning curve, quantity variations affecting economy of scale, and escalation rates account for the variation in MST kit costs across the FYDP. FY 2020 will be the initial year for MST kit procurements.</p> <p>(12) FY 2020 funding required for post production qualification radio and crypto support. Funding reflects required obsolescence mitigation including avionic, electrical, and structures bill of material development, and obsolescence Engineering Change Proposal forecasting in order to support the extended end of service date.</p> <p>(13) Includes unique support and test equipment required to support the integration of the NAV/COMMs, Modernization Kits during recertification. This would include planning, resourcing and implementing management actions to acquire and support the equipment required to sustain and validate the NAV/COMMs capability/functionality ensuring that the TACTOM is available to the warfighter when it is needed.</p> <p>(14) Includes costs for support equipment management, computer resources support, training and training support, ILS program management, and packaging, handling, storage and transportation as associated with the NAV/COMMs Modernization Kit.</p> <p>(15) Unique government and contractor production support and recurring fixed costs that is required per lot of recertification kit. Funding reflects required obsolescence mitigation including avionic, electrical, and structures bill of material development, and obsolescence Engineering Change Proposal forecasting in order to support the extended end of service date.</p> <p>(16) Increase in FY 2020 is associated with the increased demand on unique support and test equipment associated with the concurrent production of Block V TACTOM starting in FY 2020. Funding in FY 2019 and FY 2020 includes modifications/procurement of unique support and test equipment required to enable/support the integration and test of the recertification kit. This encompasses System Integration Lab (SIL), Hardware Integration Lab (HWIL), Air Vehicle System Integration Lab (AVSIL), Guidance Test Sets (GTSs) and Mid-body Range Safety Subsystem (MRSS) Kits. Funding also includes the planning, resourcing, and implementing management actions to acquire and support the equipment required to sustain and validate the capability/functionality ensuring that the TACTOM is available to the warfighter when needed.</p> <p>(17) Costs include support equipment management, computer resources support, training and training support, ILS program management, and packaging, handling, storage and transportation as associated with the recertification kit.</p> <p>(18) FY 2020-FY 2024 funding is required to recertify and extend the service life of the Composite Capsule Launching System (CCLS) barrels through procurement of rotatable pool Capsule Launching System (CLS) capsules, design and qualification of CLS missile CCA seals to support the life cycle of recertification efforts, and procurement of the hydro dynamic test fixture required for Capsule Closure Assembly (CCA) seal certification.</p> <p>(19) Recertification Line Stand-up funding is required for the prove in of the end-to-end recertification processes. The process takes five Block IV missiles through the entire recertification process. This is essential to qualifying test and tooling equipment, refining recertification processes and exercising quality/inspection procedures. All of which ensures that the end-to-end recertification line is ready for induction of missiles in FY 2020. Funding in FY 2019 includes modifications/procurement of unique support and test equipment required to enable/support the integration and test of the recertification kit. This encompasses System Integration Lab (SIL), Hardware Integration Lab (HWIL), Air Vehicle System Integration Lab (AVSIL), Guidance Test Sets (GTSs) and Mid-body Range Safety Subsystem (MRSS) Kits. Funding also includes the planning, resourcing, and implementing management actions to acquire and support the equipment required to sustain and validate the capability/functionality ensuring that the TACTOM is available to the warfighter when needed.</p> <p>(20) Support Equipment increases from FY 2022 to FY 2023 due to the increase in quantities.</p>

Description:

FY 2020 funding totals include \$0.0M for Base and \$224.502M for Overseas Contingency Operations (OCO); of which \$224.502M and 169 quantity is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

The Advanced Medium Range Air-to-Air Missile (AMRAAM) is the premier all-weather, all-environment radar guided missile developed jointly by the Air Force and Navy. The Air Force is the lead service. AMRAAM is a small, light, fast missile with improved capabilities against very low and high-altitude targets in an electronic attack (EA) environment. The AIM-120D provides increased performance from improved kinematics, GPS-aided navigation, a two-way data link; which enhances aircrew survivability and network compatibility. Additional enhancements include new guidance software to combat a technologically capable adversary to reduce risk in air combat scenarios, and limit missile defense challenges.

*Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:
 FY 2020 funding procures 169 AMRAAM missiles in support of warfighter requirements. Quantity and funding in FY 2020 is limited due to the ramp rate of Form, Fit, and Function (F3R) missile production.
 Funding also provides required support costs such as: test and technical production support, procurement of training equipment, diminishing manufacturing sources, long lead items and test equipment/test equipment upgrades to support the AIM-120D configuration.
 The FY 2020 quantities were reduced by 53 missiles since the FY 2019 President's Budget submission due to production delays required to address obsolescence issues in the current guidance section design and to realign funding to RDT&E to match USAF efforts.

Remarks:

The "To Complete" column reflects missile production through FY 2025.

(†) indicates the presence of a P-5a

Footnotes:

(1) Unit cost calculations are based on combined procurement of Navy, Air Force and FMS buys for each fiscal year. Increase in unit cost from FY 2019 to FY 2020 is due to significantly less quantity of common components across Navy, Air Force, and FMS procurements.

(‡) Delivery rows marked with this symbol indicate that they are funded through a separate Line Item. See the respective components' exhibits for details, including the full delivery schedule.

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Footnotes:

⁽⁶⁾ AIM-120 MSR is 400 missiles per year, consisting of USN, USAF, and approved FMS procurement with no less than 100 of a particular variant. Max factory capacity enables production of 960 missiles. FY 2020 production capacity is constrained to 632 missiles, of which at least 242 are FMS missiles, due to ramp rate of Form, Fit, Function Refresh (F3R).

Description:

FY 2020 funding totals include \$0.0M for Base and \$119.456M for Overseas Contingency Operations (OCO); of which \$119.456M and 292 quantity is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

The AIM-9X Block II/II+ Sidewinder (AIM-9X Blk II/II+) continues the evolution of the AIM-9 series of missiles. This missile program delivers a launch and leave, air combat munition that uses passive Infrared (IR) energy to acquire and track enemy air targets and complements the radar guided Advanced Medium Range Air-to-Air Missile (AMRAAM). F/A-18 first shot, first kill opportunities while conducting basic fighter maneuvering (dogfighting) Within Visual Range (WVR) are essential for aircrew survival. The AIM-9X provides these opportunities with unmatched offensive and defensive capabilities against threats WVR, even when IR countermeasures are employed. The AIM-9X also provides air superiority in the Beyond Visual Range (BVR) air-to-air battle. Anti-tamper features have been incorporated to protect improvements inherent in this design. The AIM-9X Block II missile is critical for projecting power and winning decisively against threats identified in Defense Planning Guidance and the Navy's Navigation Plan.

AIM-9X is a Post Milestone C, Acquisition Category IC (ACAT-IC) joint service program led by the Department of the Navy. In June 2011, the Milestone Decision Authority (MDA) established the AIM-9X Block II missile program which was approved for entry at Milestone C for Low Rate Initial Production (LRIP). The 2366 A/B certification and Acquisition Program Baseline for AIM-9X Block II was signed December 23, 2011, and the Block I program was terminated. In August 2015, the program received approval for Full Rate Production (FRP), and the Acquisition Program Baseline was re-established.

In December 2017, the program began to procure a third variant of the missile labeled the AIM-9X Block II PLUS (Block II+) to satisfy the requirements of the Joint Strike Fighter platform. This version of the missile is being produced on the same production line as the AIM-9X Block II missile. For contracting purposes, the nomenclature of the AIM-9X Block II missile is identified as AIM-9X-2 and the AIM-9X Block II+ missile will be identified as AIM-9X-3.

The USN & USAF require additional quantities beyond the approved APB (Change 1: 31 Aug 2015); an update is in staffing for approval.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:
 FY 2020 provides funding to procure the sixth lot of Full Rate Production (FRP) AIM-9X Block II (Blk II) missiles, as well as the fourth lot of AIM-9X Block II Plus (Blk II+) missiles for the Navy and the Air Force. Previously planned missile procurements in FY18 and out associated with Army Indirect Fire Protection Capability Increment 2 (IFPC2) program have been removed from this budget.

The program unit costs are based on all quantities procured the US Navy, US Air Force and Foreign Military Sales customers. Total Program quantity by service includes a mix of All Up Round (AUR) missiles and Captive Air Training Missiles (CATM) as such:

The Navy will procure 3,937 total missiles under this Budget Line Item: 1,289 Block I missiles (885 AURs and 404 CATMs) and 2,648 Block II/II+ missiles(2067 AURs and 581 CATMs). In addition, the Navy procured 63 Block I missiles in FY 2001 under the AIM-9M Modification program (48 AURs and 15 CATMs).

<p>Remarks: [Flyaway]</p> <p>(t) indicates the presence of a P-5a</p> <p>Footnotes:</p> <p>(1) AUR Block II - This budget exhibit represents only the US Navy portion of the total program procurement. AUR Block II unit cost changes are heavily driven by total program quantity changes from year to year. The majority of parts on an All Up Round (AUR) Block II are common with CATMs and Block II Plus. As a result, the overall quantities procured (between AUR Block II, AUR Block II Plus and CATMs) to include all customers (Navy, Air Force, and Foreign Military Sales) drive the unit cost. In addition to the Navy AUR Block II quantity decreasing from 228 in FY19 to 210 in FY20 as reflected in this exhibit, the total quantity of missile procurements (all configurations for all customers) decreases from 807 in FY19 to 727 in FY20, resulting in a higher unit cost.</p> <p>(2) CATMs - This budget exhibit represents only the US Navy portion of the total program procurement. CATM unit cost changes are heavily driven by total program quantity changes from year to year. The unit cost increase for CATMs from FY19 to FY20 is due to an overall decrease in CATM quantities for the total program. Although the Navy CATM quantity only decreased by one from 75 in FY19 to 74 in FY20 as reflected in this exhibit, the total CATM quantity (for all customers) decreased from 169 in FY19 to 74 in FY20, resulting in a higher unit cost.</p> <p>(3) AUR Block II Plus - This budget exhibit represents only the US Navy portion of the total program procurement. Block II Plus unit cost changes are heavily driven by total program quantity changes from year to year. The unit cost increase for Block II Plus from FY19 to FY20 is due to an overall decrease in Block II Plus quantity for the total program. Although the Navy Block II Plus did not change from 8 in FY19 to 8 in FY20 as reflected in this exhibit, the total Block II Plus quantity (for all customers) decreased from 138 in FY19 to 88 in FY20, resulting in a higher unit cost.</p> <p>(4) The Engineering Change Orders line provides funding to test and qualify class 1 engineering changes proposed by the prime vendor into missile production. The increase in FY 2020 reflects planned production hardware engineering changes.</p> <p>(5) DMS provides funding to design, develop, test and qualify form/fit/function replacement components to the production missile as a result of changes in sub-vendor manufacturers.</p> <p>(6) The Government Furnished Equipment line procures government owned hardware required to produce the missiles. The primary item procured is warheads. The increase from FY 2019 to FY 2020 is due to increased total hardware buy. Beginning in 2021, the current warhead will be replaced with an improved insensitive munition warhead which will be contractor furnished equipment.</p> <p>(7) The ST/STE line provides funding for production tooling and test equipment to the AIM-9X manufacturing line to ensure missiles are produced efficiently, and within specifications. Every 3 years the program requires production tooling to be replaced.</p> <p>(8) Containers are procured to ship missiles and are procured 1 for every 4 missiles of each variant (missile variants cannot be mixed within a container). The unit cost increase from FY 2019 to FY2020 reflects updates to the pricing model. The updated model incorporates actual Raytheon contract equipment costs and uses the current Forward Pricing Rate Recommendation to estimate Raytheon labor.</p> <p>(9) The production tech support line includes funding to manage technical documentation, training development and delivery, production support, and management of government owned property, to support production of AIM-9X configurations.</p> <p>(10) The PSE line provides for calibration and procurement of government furnished gauges and equipment used to support missile production.</p> <p>(11) The training support line provides technical publications and training manuals to fleet maintainers.</p> <p>(12) The training equipment line includes the Telemetry (TM) Kits used to collect flight data for production qualification testing and weapons safety evaluations. TM kits are based on missile quantities. TM kits are manufactured by Naval Air Warfare Center, China Lake.</p> <p>(13) The government in-house support line provides US Government Systems Engineering and Project Management support at Naval Air Warfare Centers for the production of the AIM-9X missile to ensure compliance with joint service developed cost, schedule and performance requirements.</p>

(†) Delivery rows marked with this symbol indicate that they are funded through a separate Line Item. See the respective components' exhibits for details, including the full delivery schedule. "A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

Joint Standoff Weapon (JSOW) is a joint United States Navy (USN)/United States Air Force (USAF) program with the USN as the lead service. The JSOW program provides an air-to-ground glide weapon (AGM-154) capable of attacking a variety of targets during day, night, and adverse weather conditions for use against fixed area targets and moving maritime targets. The JSOW enhances aircraft survivability as compared to alternate interdiction weapon systems by providing the capability for launch aircraft to standoff outside the range of most target area surface-to-air threat systems. The JSOW Global Positioning System (GPS)/Inertial Navigation System (INS) capability allows several target kills per aircraft sortie.

The JSOW baseline BLU-97 variant (AGM-154A) has been integrated on USN (F/A-18C/D/E/F) and USAF (F-16C/D, B-2 and B-52) aircraft. The JSOW BLU-108 (AGM-154B) variant provides an anti-armor/tank capability. The JSOW unitary variant (AGM-154C) utilizes the common airframe of the AGM-154A and AGM-154B variants and incorporates an infrared uncooled seeker with autonomous targeting acquisition. The payload includes a 500 pound class Broach multi-stage warhead. AGM-154C was approved for Low Rate Initial Production (LRIP) on 26 June 2003. Full Rate Production (FRP) of the AGM-154C began in December 2004. A Network Enabled Weapon (NEW) moving maritime target capability has been incorporated in JSOW-C production units (AGM-154C-1 variant) starting with the FY 2009 procurement. The AGM-154-C-1 units retain the basic AGM-154C capability against fixed land targets.

JSOW Extended Range will include an engine avionics upgrade, and improved software to increase range greater than 200nm to kinetically engage adversary surface combatants and land targets at tactically significant ranges. Production of this configuration commences in FY 2022 and provides capacity to execute Navy operational plans.

Description:

FY 2020 funding totals include \$0.0M for Base and \$500.608M for Overseas Contingency Operations (OCO); of which \$500.608M and 125 quantity is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

Prior Year (PY) Advance Procurement funding in the amount of \$83.789M is an FY 2019 Base Requirement, but is reflected as OCO in this exhibit to show the Total Obligation Authority.

The SM-6 Block I provides an extended range engagement capability to provide the air superiority and the umbrella of protection for joint U.S. forces and allies against the full spectrum of manned-fixed and rotary-winged aircraft, unmanned aerial vehicles, and land attack and anti-ship cruise missiles in flight. This capability contributes significantly to the continuous protection of forward deployed ground maneuver forces as well as theater rear assets.

The SM-6 is the primary extended range air defense weapon for AEGIS cruisers and destroyers and potentially future combatants.

The program was approved for a five-year Multiyear Procurement beginning in FY 2019 and completing in FY 2023. Advance Procurement information is provided in exhibit 2234C.

The Accelerated Acquisition Board of Directors (AA BoD) met on 17 January 2018 and approved the designation of the SM-6 Block IB Phase IA as a Rapid Prototyping, Experimentation, and Demonstration (RPED) project. This designation acknowledged the requirement to expedite the development, acquisition, and fielding of the SM-6 Block IB to Naval Forces. The AA BoD met 9 November 2018 and directed SM-6 BLKIB to commence All Up Round prototyping (Phase IB).

SM-6 BLKIB funding begins in FY21. The SM-6 BLKIB program leverages existing missile technology and advanced missile technology. It aligns with the STANDARD Missile roadmap and takes advantage of the Navy's investment in the AEGIS Weapon System (AWS). This missile will provide an extended range capability for SM-6 and will be a key contributor to the protection of Joint U.S. Forces in support of the 2018 National Defense Strategy. SM-6 Block IB addresses valid Joint, Fleet, and Navy Urgent Operational Needs and existing JROC-approved requirements.

WIB MAT Project 1 also begins in FY21. Additional details are held at a higher classification.

Justification:
SM-6 BLKI/IA: FY 2020 provides funding to procure 125 SM-6 Block I and SM-6 Block IA missiles to support warfighter requirements as well as required support costs such as production engineering, Diminishing Manufacturing Sources (DMS), containers, fleet documentation, and install/checkout equipment.

The budget reflects a funding profile for a five-year Multiyear Procurement beginning in FY 2019 and completing in FY 2023. Advance Procurement information is provided in exhibit 2234C (P10).

(t) indicates the presence of a P-5a

Footnotes:

- (1) Production cut-in decision for the Engineering Change Proposal (ECP) for the SM-6 Block IA configuration was included in the FY 2015 SM-6 Production Contract. The ECP cost line shown in FY 2017 is additional cost required to implement the ECP and procure the maximum number of SM-6 Block IA All Up Rounds (AURs), limited by maximum production rate. The Navy will procure SM-6 Block I and SM-6 Block IA missiles, not to exceed the quantities shown here. Further detail can be provided at a higher classification level. The SM-6 Block IA ECP will be at FRP procurement rates starting with the FY2018 procurement deliveries. Further detail can be provided at a higher classification level.
- (2) FY 2018 combined cost code 1.1.1) FE002 SM-6 Block I All UP Round Missile and 1.1.2) FE002 SM-6 Block IA ECP into 1.1.3) SM-6 Block I/IA All Up Round Missile to provide the blended costs of the Block I and Block IA missiles. The Navy remains committed to procuring the maximum number of SM-6 Block IAs, limited by maximum production rate. The SM-6 Block IAs are more technologically advanced than the SM-6 Block I and therefore have higher unit cost. The budget reflects a funding profile for a five-year Multiyear Procurement beginning in FY 2019 and completing in FY 2023. Advance Procurement information is provided in exhibit 2234C.
- (3) Canisters are not procured through the prime contractor and are not included in the Multiyear Procurement Contract. FY 2019 increase due to the mix of missiles being procured. Mod 3 Canisters are procured for both BLKI and BLKIA, but require additional cost for parts and engineering to convert the BLKI Mod 3 Canisters into BLKIA Mod 4 canisters. The increase in FY 2019 reflects the additional procurement of BLKIAs.
- (4) FY 2019 to FY 2020 increase is due to obsolete parts/source volatility leading to increase in life-of-type procurements.

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Footnotes:

⁽⁶⁾ MSR reflects a ramp up to a stable production rate for SM-6 Block IA.

⁽⁷⁾ Production cut-in decision for the Engineering Change Proposal (ECP) for the SM-6 Block IA configuration was included in the FY 2015 SM-6 Production Contract. The ECP cost line shown in FY 2017 is additional cost required to implement the ECP and procure the maximum number of SM-6 Block IA All Up Rounds (AURs), limited by maximum production rate. The Navy will procure SM-6 Block I and SM-6 Block IA missiles, not to exceed the quantities shown here. Further detail can be provided at a higher classification level.

Description:

FY 2020 funding totals include \$0.0M for Base and \$96.085M for Overseas Contingency Operations (OCO); of which \$96.085M and 125 quantity is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

The SM-6 Block I provides an extended range engagement capability to provide the air superiority and the umbrella of protection for joint U.S. forces and allies against the full spectrum of manned-fixed and rotary-winged aircraft, unmanned aerial vehicles, and land attack and anti-ship cruise missiles in flight. This capability contributes significantly to the continuous protection of forward deployed ground maneuver forces as well as theater rear assets. The SM-6 is the primary extended range air defense weapon for AEGIS cruisers and destroyers and potentially future combatants.

*Title represents the P-10 Title for Advance Procurement.
 Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:
 The budget reflects a funding profile for a five-year Multiyear Procurement beginning in FY 2019 and completing in FY 2023. The multiyear procurement contracts provide for the procurement of up to 625 Standard Missile-6 (SM-6) guided missiles. The use of Advanced Procurement provides Economic Order Quantity (EOQ) to reduce the cost of subcontractor effort, material, and components enabling greater production efficiencies and substantial cost savings.

Funding covers EOQ in support of the FY 2019-2023 MYP contract. EOQ will fund the procurement of MK72 Booster, MK104 Dual Thrust Rocket Motors (DTRM) and Guidance Sections. Booster is a 26 month lead time due to the unique steel for the case and additional time for mating with a (TVA) Thrust Vector Actuator. The DTRM has a 22 month lead time due to the specialty steel required for manufacturing. The guidance section takes 24 months to deliver due to the lead time in the specialty Circuit Card Assemblies.

Description:

FY 2020 funding totals include \$0.0M for Base and \$118.466M for Overseas Contingency Operations (OCO); of which \$118.466M and 750 quantity is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

Small Diameter Bomb Increment II (SDB II) is an ACAT 1C program providing the warfighter a capability to attack mobile targets in all weather. The Air Force (USAF) is the lead service. The SDB II increases joint lethality in contested environments. The SDB can strike a diverse set of targets inside an adversary's air and missile defense networks to destroy mobile platforms through the weather. With increased loadout, range, and munitions effect the network enabled SDBII enhances close combat lethality in complex terrain.

Threshold aircraft is the F-15E for the USAF and F-35B and F-35C for the Department of Navy (DON). Objective aircraft include the F/A-22, B-1, B2, F-117, F-16, B-52, Predator B, F/A-18 E/F. Milestone C was achieved June 2015.

The Acquisition Decision Memorandum was signed 4 June 2015. Lots 1 through 3 are Air Force only procurements; Lot 1 awarded 12 June 2015. SDB II will be integrated on F-35B and F-35C using BRU-61 (due to the cancellation of the Joint Miniature Munitions Bomb Rack contract), and on F/A-18 E/F using BRU-55. The F/A-18 E/F Initial Operational Capability (IOC) is planned for FY 2020; F-35 IOC is planned for FY 2022. The total planned SDB II procurement is 17,000 weapons; 12,000 for the AF and 5,000 for the DoN.

Funds may be used to resolve production DMS/MS/Obsolescence issues through studies, bridge buys, life of type buys, supplier/parts replacement and qualification activities to preserve future production capabilities and capacities.

[P5 / All Up Round (AUR)]: Lots 1-5 (FY 2018 and FY 2019) are competitively priced options to the SDB II EMD contract. Lots 6-11 will be awarded under sole source contract, therefore, prices will be higher.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:
FY 2020 provides funding to procure 750 SDB II All Up Rounds (AUR) to support warfighter requirements as well as containers, Government In-house (GIH) production support, software updates, weapon load crew trainers (WLCT), special tooling, test equipment, peculiar support equipment, and integrated logistics support.

Current contract for Production Lots/Service includes the following:
 Lot 1 - USAF (144)
 Lot 2 - USAF (250)
 Lot 3 - USAF (312)
 Lot 4 - USAF (570) / USN (90)
 Lot 5 - USAF (510) / USN (750)

(t) indicates the presence of a P-5a

Footnotes:

- (1) Cost Element 1.1.1 (AUR) Lots 1-5 (FY 2018 and FY 2019) are competitively priced options to the SDB II EMD contract. Lots 6-11 will be awarded under sole source contract, therefore, prices will be higher. FY 2020 (Lot 6) unit cost will be higher than Lot 7 due to the first year of procurement under the new sole source contract. Reduction in unit cost is anticipated in FY 2021 (Lot 7), then follow inflation increase from FY 2021 and beyond.
- (2) Cost Element 2.1.1 (Containers) The Department of the Navy is buying two-place containers. One container is required for every two SDB II weapons and every two Weapon Load Crew Trainers. As quantity of SDB II increases, so will total cost for containers. Cost reflected is the total cost for these containers. Lots 1-5 (FY 2018 and FY 2019) are competitively priced options to the SDB II EMD contract. Lots 6-11 will be awarded under sole source contract, therefore, prices will be higher. FY 2020 (Lot 6) costs will be higher than Lot 7 due to the first year of procurement under the new sole source contract. Reduction in unit cost is anticipated in FY 2021 (Lot 7), then follow inflation increases from FY 2021 and beyond.
- (3) Cost Element 3.1 Government In-House (GIH) Production support is government labor in support of the production of the All Up Round to include engineering and logistics.
- (4) Cost Element 3.2 Special Tooling is required to bring Raytheon Missile Systems to Full Rate Capacity. This cost is being shared by the DoN and USAF based on the total program of record quantities.
- (5) Cost Element 3.3 Software updates will be made one year, with weapon Operational Flight Plan (OFP) updates on the opposite year.

(‡) Delivery rows marked with this symbol indicate that they are funded through a separate Line Item. See the respective components' exhibits for details, including the full delivery schedule.

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

FY 2020 funding totals include \$0.0M for Base and \$106.765M for Overseas Contingency Operations (OCO); of which \$106.765M and 120 quantity is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

Rolling Airframe Missile (RAM) is a high fire-power missile system used to defeat Anti-Ship Cruise Missiles (ASCMs), as well as other airborne threats. RAM is a surface-to-air missile with passive dual-mode radio frequency/infrared (RF/IR) guidance and an active-optical proximity and contact fuse. RAM has minimal shipboard control systems and is autonomous after launch. Effective against a wide spectrum of existing threats, RAM Block 1 IR upgrade incorporates IR "all-the-way-homing" to improve performance against evolving passive and active ASCMs. RAM Block 2 provides increased kinematic capability against highly maneuvering threats and improved RF detection against low probability of intercept threats. The RAM missile is fired from a RAM Guided Missile Launching System (GMLS) (MK-49), which holds 21 RAM rounds. RAM is also fired from the SeaRAM Anti-Ship Missile Defense System (MK-15 MOD 31-33) which holds 11 rounds.

COOPERATIVE AGREEMENTS:

RAM is a cooperative program with the Federal Republic of Germany. The U.S. and Federal Republic of Germany cooperatively produce Block 1 missiles, launchers, and Ordnance Alterations (ORDALTs) through the Block 1 production Memorandum Of Agreement (MOA), Amendment 2 signed on 28 September 2010. The Block 2 production Memorandum of Understanding (MOU) was signed on 19 March 2013 with the U.S and Federal Republic of Germany to cooperatively produce Block 2 missiles, launchers, and ORDALTs. Amendment 1 to the Block 2 Memorandum of Understanding (MOU) is currently being staffed with the U.S and Federal Republic of Germany to cooperatively produce Block 2 missiles, launchers, and ORDALTs and continue to provide support for Block 1 configuration through FY 2022.

[P5 / EF008 Block 2 Missile]: Warhead is the explosive component that is activated by the target detector upon detection of the incoming anti ship cruise missile.

[P5 / EF008 BLK 2 GMRP ORDALTS]: Block 2 GMRP Ordalts utilize common components from Block 1A returning from the Fleet. Deliveries have the same capabilities as new build Block 2.

[P5 / EF008 Telemeters]: Telemeter sections are necessary for Fleet training and operational test events to collect data and conduct performance analysis.

<p>[P5 / EF850 Component Improvement/DMS]: Provides RAM Design Agent engineering and technical support for component replacement and improvement. The RAM Guided Missile Round Pack (GMRP) is a build to print missile that includes commercial-off-the-shelf hardware. Support includes the development/review/approval/verification of production engineering change proposals and obsolescence mitigation efforts. This support is required to ensure that the build to print package continues to support the system performance specs as production matures. Funding also supports replacement of key components due to end of lifetime buy.</p> <p>[P5 / EF850 Component Improvement]: Provides RAM Design Agent engineering and technical support for component replacement and improvement. The RAM Guided Missile Round Pack (GMRP) is a build to print missile that includes commercial-off-the-shelf hardware. Support includes the development/review/approval/verification of production engineering change proposals and obsolescence mitigation efforts. This support is required to ensure that the build to print package continues to support the system performance specs as production matures.</p> <p>[P5 / EF957 Containers]: Procures containers for transporting the GMRP.</p> <p>[P5 / EF830 Production Support]: Provides critical engineering and technical support of the production line and production test equipment. Efforts include the technical investigation and resolution of production issues, control and maintenance of the technical data package, resolution of test equipment issues, configuration management, reliability assessments, and safety. Production support is an annual requirement which supports all on-going production and is independent of contract award quantities.</p> <p>[P5 / EF830 Production Support Contractor Engineering]: Provides critical engineering and technical support of the production line and production test equipment. Efforts include the technical investigation and resolution of production issues, control and maintenance of the technical data package, resolution of test equipment issues, configuration management, reliability assessments, and safety. Production support is an annual requirement which supports all on-going production and is independent of contract award quantities.</p> <p>[P5 / EF830 Production Support Gov In-House Engineering]: Provides critical engineering and technical support of the production line and production test equipment. Efforts include the technical investigation and resolution of production issues, control and maintenance of the technical data package, resolution of test equipment issues, configuration management, reliability assessments, and safety. Production support is an annual requirement which supports all on-going production and is independent of contract award quantities.</p> <p>[P5 / EF860 Product Acceptance]: Funds field activity product acceptance efforts.</p> <p>[P5 / EF974 ILS]: Funds Integrated Logistics Support (ILS) efforts in support of production.</p>

*Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:
 FY20 - Due to lower than projected FY19 Foreign Military Sales procurement quantities, the program was unable to reach the anticipated USN procurement quantity of 120 missiles in FY2019. Instead the FY19 quantity based on the current US/FMS quantities and negotiated FY19 contract pricing is expected to be 108. The budget increased from FY2019 to FY2020 to reflect hardware funding to support a procurement of 120 missiles. The hardware budget in FY2020 more accurately reflects the cost of 120 missiles.

Remarks:

[Support Cost] Additional efforts required to support DMS is driving the increase in production support for updating the technical data package (TDP). Production support is an annual requirement which supports all on-going production and is independent of contract award quantities.

(t) indicates the presence of a P-5a

Footnotes:

- (1) FY18 GMRP Contract included procurement of 5 Telemetry All Up Round Missiles (AUR). The Telemetry rounds do not include the Safe and Arm Device component
- (2) FY18 GMRP Contract included procurement of 5 Telemetry All Up Round Missiles (AUR). The Telemetry rounds do not include the Ordnance Pack Component.
- (3) FY19 GMRPs utilize existing Warhead stock. FY20 Warheads will need to be procured.
- (4) FY19 Budget did not support Ordalt procurement. FY20 we are budgeted to procure 9 Ordalts.

<p>⁽⁵⁾ FY19 Component Improvement funds supported a quantity of 108. Fy20 supports a quantity of 120 plus 9 Ordalts. In addition funding supports final implementation of the ERF Tech Refresh Project.</p> <p>⁽⁶⁾ DMS reflects normal levels of manufacturing obsolescence associated with Field-Programmable Gate Arrays (FPGA), flash drives, capacitors, resistors, inductors, diodes, adhesives, chemicals (rocket motor), materials (potting, fiberglass, printed circuit cards, alloys), etc. RAM also has a requirement for long term storage making it susceptible to tin whiskers. Therefore, many components require unique tin-lead alloy or lead coating to prevent this phenomenon. These components historically have recurring short time frame obsolescence issues.</p> <p>⁽⁷⁾ FY20 Production Support funding supports a quantity of 120. FY19 Funding supported a quantity of 108. Funding also supports Transition to Production for implementation of the ERF Tech Refresh.</p>

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Footnotes:

⁽⁸⁾ MSR assumes ORDALT procurement is in conjunction with procurement of 90 GMRP's.

Description:

The Joint Air-to-Ground Missile (JAGM) is an air-launched missile system that will incorporate multi-mode seeker technology thus providing advanced Line-of-Sight and Beyond-Line-of-Sight precision fire and-forget seeker targeting capabilities resulting in increased lethality against soft, hardened, moving, stationary, land and maritime threats. JAGM improves the warfighter's capability in adverse weather, day or night, and in obscured/countermeasure environments. The JAGM Increment 1 system will replace aviation-launched, Tube-launched, Optically-tracked, Wire-guided (TOW) missile, and Helicopter Launched Fire-&-Forget (HELLFIRE) Missile Systems. JAGM is an Army-led joint program that addresses rotary wing and unmanned aerial vehicle requirements. The Department of Navy threshold platform is the AH-1Z. The JAGM system includes missile, trainers, containers, support equipment, and software modifications to the M-299 launcher. Missile configurations include the JAGM Tactical Missile, Captive Air Training Missile and Air Training Missile.

*Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:
 OCO:
 FY2020 funding supports the procurement of JAGM All Up Rounds (AURs) to replace Hellfire inventory that has been expended in support of Operation Inherent Resolve (OIR) and enduring efforts. The assets are replacing expenditures that occurred from October 1, 2012 through December 2, 2016. There is currently no Hellfire variant in production that is integrated with DoN platforms and since JAGM is the successor to Hellfire, the combat expenditures are being replaced with the JAGM.

Funding is also to support 4 Captive Air Training Missiles (CATMs), Other Production Support (OPS), and production related engineering and logistics support.

Footnotes:

- (1) (JG001) All Up Round (AUR) unit costs will fluctuate according to total procurement between all services.
- (2) (JG002) Training Missiles are for procurement of Air Training Missiles (ATMs) required for fleet training and quantities count towards the total program quantity requirement. Training Missiles unit costs will fluctuate according to total procurement between all services.
- (3) (JG301) Captive Air Training Missiles (CATM's): The JAGM program will commence procurement of CATM's in FY 2020 based on fleet training requirements.
- (4) (JG005) Starting in FY 2020 Container cost will be rolled up into the All Up Round unit cost.
- (5) (JG007) Other Production Support fluctuates based on Army requirements and is dependent on total procurement buy per year.

(‡) Delivery rows marked with this symbol indicate that they are funded through a separate Line Item. See the respective components' exhibits for details, including the full delivery schedule. "A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Footnotes:

⁽⁸⁾ Annual Production rates for All Up Rounds and Training Missiles represent combined rates.

Description:

FY 2020 funding totals include \$0.0M for Base and \$1.525M for Overseas Contingency Operations (OCO); of which \$1.525M and 29 quantity is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

AGM-114 Hellfire is a family of laser guided missiles employed against point and moving targets by both rotary and fixed wing aircraft. The family of Hellfire missiles includes, but is not limited to, AGM-114B/K/K2/K2A/M/N/N-5/P/P+/Q/Q6 variants. These variants include shaped charge warheads for use against armored targets and blast fragmentation warheads for use against urban structures. The AGM-114N is a thermobaric blast fragmentation warhead that maintains the capability provided by the AGM-114M while adding a unique capability against confined compartmented spaces, a typical target type observed in current combat operations. Other variants include the K2A, which has a blast frag sleeve for use against soft-skinned tactical vehicles, the N5, which provides a trajectory shaping capability to increase endgame lethality against vertical structures, and the P/P+ variants, which include high altitude launch trajectories for use from fixed-wing aircraft. Additionally, the Q and Q6 variants have inert warheads, which are used for training on ranges that do not allow live warheads, and to preserve tactical missiles for use in combat. Conversions from one variant to another are done on an as needed basis.

Prior year funding includes Hellfire, Viper Strike, and Griffin.

(t) indicates the presence of a P-5a

Footnotes:

- (1) FY20 unit price lower due to Tri-Service Procurement of the Army, Navy and Air Force.
- (2) Prior year costs include funding for Viper Strike and Griffin. Funding procured 140 Viper Strike and 130 Griffin missiles.
- (3) Production Engineering Support (PES) is proportional to weapon procurement quantities.

^(†) indicates the presence of a P-21

Footnotes:

- ⁽⁴⁾ MSR is for Tri-Service Procurement of the Army, Navy and Air Force.
- ⁽⁵⁾ F6300 FY 2018 Air Training Missile contract is an Army led contract that awards in September in order to combine all services and FMS procurements to achieve an economical unit cost.
- ⁽⁶⁾ F6300 FY 2019 Air Training Missile contract is an Army led contract that awards in September in order to combine all services and FMS procurements to achieve an economical unit cost.
- ⁽⁷⁾ F6300 FY 2020 Air Training Missile contract is an Army led contract that awards in September in order to combine all services and FMS procurements to achieve an economical unit cost.

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Footnotes:

⁽⁴⁾ MSR is for Tri-Service Procurement of the Army, Navy and Air Force.

⁽⁸⁾ There is not a break in production due to Tri-Service procurement.

Description:

The AGM-65 Maverick is a tactical, air-to-surface, guided missile designed for close-air support, interdiction and defense suppression missions. It also provides stand-off capability and high strike probability against a wide range of tactical targets, including high-speed moving targets, armor, air defenses, ships, transportation equipment and fuel storage facilities. The AGM-65E2 is a joint effort by the Navy and Air Force to modernize this capability with an enhanced laser seeker and new software that reduces the risk of collateral damage. The AGM-65E2 is a modification to the Maverick's Guidance and Control Section (GCS) to incorporate modern components which are a suitable replacement for the obsolete components of the existing AGM-65E.

Description:

Stand Off Precision Guided Muniton (SOPGM) weapon, Griffin Missile, is the threshold weapon for the KC-130J Intelligence, Surveillance and Reconnaissance (ISR) Weapon Mission Kit USMC requirement. This weapon satisfies a portion of the required roll-on/roll-off capability inherent in the ISR Weapon Mission Kit.

Griffin is a rocket propelled missile and uses the Global Positioning System/Inertial Navigation System (GPS/INS) to navigate to the target vicinity and a semi-active laser (SAL) seeker for terminal guidance to target impact.

The Griffin will be used on KC130J (Alpha variant) and Cyclone class Patrol Coastal (PC) ships (Bravo variant). The Griffin Alpha variant is an air launched missile and the Bravo variant is a ship launched missile.

Footnotes:

- (1) US SOCOM awarded a sole source 5 years IDIQ in FY 2017 to cover purchases in FY 2017 through end of contract period of performance. Awarded 18 August 2017.
- (2) Production engineering support line includes Griffin Missile engineering services efforts related to field and operations services; Anti-jam Protection Technology Receiver Global Positioning System (GPS); program management office technical support; and US SOCOM contract processing fee. Funding will be required to continue Griffin Missile Ordnance Assessment surveillance program which began in FY 2016 and will be on-going through FY 2019 to extend the Griffin Missile Service Life from 5 years to 11 years to support Fleet loadout requirements.
- (3) SM860 Integrated Logistics Support funds support a one-time requirement to certify and qualify the AGM-176A Block III on the Harvest HAWK platform. These funds will provide 16 AURs for destructive testing, fund testing costs including flight hours, range space, telemetry, and other required support costs including associated administrative and contractor fees.
- (4) SM850 Production Engineering Support funds support a one-time requirement to certify and qualify the AGM-176A Block III on the Harvest HAWK platform. These funds will provide 16 AURs for destructive testing, fund testing costs including flight hours, range space, telemetry, and other required support costs including associated administrative and contractor fees.

Description:

FY 2020 funding totals include \$0.0M for Base and \$152.38M for Overseas Contingency Operations (OCO); of which \$145.88M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

The Aerial Targets program provides threat representative aerial targets for test and evaluation (T&E) and fleet training events. Assets procured under this line item are used to simulate and replicate currently fielded subsonic and supersonic Anti-Ship Cruise Missile (ASCM) threats. The threat representative targets are used to test and evaluate Navy ship self-defense systems currently in development, and are required for the successful completion of independent operational test and evaluation prior to fielding the systems to the fleet. Some variants are also used as fleet training assets to support fleet readiness. All assets procured by the Aerial Targets program are critical elements in improving the warfighters ability to counter threats and improve threat readiness capability. This program is composed of four primary components: (1) Subsonic Aerial targets, (2) Supersonic Targets, (3) Full Scale Aerial Target (FSAT), and (4) Auxiliary/Augmenting Systems.

(1) Subsonic Aerial Targets

The Subsonic aerial targets portfolio is composed of production and modification programs, such as the BQM-177A, BQM-34, BQM-74, and others. In addition to production of the BQM-177A, funding is used to procure associated hardware and mission kits, avionics upgrade kits and other modification and Engineering Change Proposals (ECPs) as required. The BQM-177A SSAT provides dynamic, high-subsonic, sea-skimming, ASCM threat emulation for testing of USN ship defensive weapon systems and other surface-to-air systems and will replace current BQM-74E subsonic targets with increased capabilities. The BQM-34S is a jet-powered, high subsonic speed aerial target and the modification effort allows for the continued utilization of current BQM-34S inventories which are required to quickly mitigate critical subsonic inventory shortfall(s) to support Fleet Live-Fire training until the BQM-177A SSAT is fielded. Assets may be recovered and reused depending on the objectives of the event. Other subsonic targets include the BQM-74E and various Unmanned Aerial Vehicle (UAV) platforms to replicate emerging UAV threats. Funding may also be used to fund ECPs during the production process and to procure other subsonic targets in support of unique and emerging threat simulations.

(2) Supersonic Targets

The Supersonic targets program is composed of a continuing powered supersonic target production/modification program, the GQM-163A Supersonic Sea Skimming Target (SSST). The SSST is a non-recoverable supersonic sea skimming aerial target, capable of speeds in excess of Mach 2.5 and cruise altitudes from 15 to 66 ft. SSST replicates a family of supersonic sea skimming, ASCM threats to meet critical T&E requirements of USN ship self-defense systems. Additionally, SSST has successfully demonstrated a higher altitude diving threat profile capability. Funding may also be used to fund ECPs and production modifications to help the supersonic targets keep pace with emerging threats.

ID Code (A=Service Ready, B=Not Service Ready): B	Program Elements for Code B Items: N/A	Other Related Program Elements: N/A
Line Item MDAP/MAIS Code: N/A		
<p>(3) Full Scale Aerial Target (FSAT) The QF-16 FSAT is an Air Force-led program providing a 4th generation, full scale, threat representative target providing a replacement for the FSAT/QF-4. The QF-16 FSAT is a converted F-16 aircraft that provides a supersonic, high altitude, remote-controlled aerial target. This target has full command and control capability through normal flight envelopes. The QF-16 FSAT target presentations supports aircraft and weapons systems testing and development, including that of the Joint Strike Fighter, AIM-9X Sidewinder missile, AIM-120 Advanced Medium Range Air-to-Air Missile, and Standard Missile-6.</p> <p>(4) Auxiliary/Augmenting System Targets The Auxiliary/Augmenting Systems includes various procurements of target ground control systems required to safely operate all aerial targets and threat simulator(s) payloads that replicate electronic attack and active emitters found on current threat missiles. The Target Mission Support Systems program provides target control and scoring, location, and navigation of targets for Fleet training and weapons systems test and evaluation. The Target Threat Simulation Program systems, installed on subsonic or supersonic targets as required, replicate various threats dependent upon the objectives of the test and evaluation event(s). When the target is destroyed, these assets are consumed and require replacement. As requirements to establish readiness capability increase, it is critical to maintain sufficient inventory of the Auxiliary/Augmenting Systems & Target Threat Simulation devices. Avionics equipment, common to all aerial targets, are also procured under Aux/Aug System Targets.</p>

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:
Subsonic Aerial Targets
 FY 2020 funding supports the procurement of 40 BQM-177A Subsonic Aerial Targets (SSATs) as well as associated kits and equipment. Funds also support continued procurement/installation of avionics upgrade kits for modification to the BQM-34S targets, ECPs for the BQM-74E and other subsonic target hardware. Funds increase from FY 2019 to FY 2020 due to increase of production quantities in order to meet DDG 1000/ Advanced Missile Defense Radar Testing requirements and support Fleet Live fire with a purpose training events. All cost codes were affected and increased with the increased production quantity.

Supersonic Targets
 FY 2020 funding is required for the procurement, production, and modification of GQM-163A supersonic targets. OCO for Baseline funds will support execution of the 17 GQM-163A Supersonic Sea Skimming Targets (SSST) via the FRP 14 contract with one additional GQM-163A target procured with FY 2020 Direct War OCO funds in support of the formidable Shield Exercise. A total of 18 GQM-163A targets will be procured.

Full Scale Aerial Targets
 FY 2020 funding is required for procurements, production, and modification of the QF-16 Full Scale Aerial Target (FSAT). Funds will support execution of the QF-16 FSAT Lot 6 contract with the procurement of two QF-16 targets and associated support. Funds increase from FY 2019 to FY 2020 due to increased projected Pt Mugu operations, costs of equipment needed, and other associated hardware.

Auxiliary/Augmenting System Targets
 FY 2020 funding is required for Auxiliary/Augmenting Systems to continue production of various target command and control systems, scoring equipment, location, identification, and navigation equipment required to safely operate all aerial targets. The targets require production of various threat simulator(s) payloads that provide affordable high fidelity simulation environments of foreign threat electronic attack and threat radar emissions. Target threat simulation requires various electronic countermeasures equipment and active emitter augmentation equipment. Funds increase from 2019 to FY 2020 to support procurements of Aerial Target Mission Support System to deliver high interest Fleet training.

OCO:
 FY 2020 Enduring Requirements OCO funds (\$6.5M) required to procure one GQM-163A Supersonic Sea Skimming Targets (SSST and associated equipment and support via the FRP 14 contract in support of the formidable Shield Exercise.

ID Code (A=Service Ready, B=Not Service Ready) :		MDAP/MAIS Code:
<p>in FY 2021, in order to meet DDG 1000/ Advanced Missile Defense Radar Testing requirements and support Fleet Live fire with a purpose training events. All cost codes were affected and increased with the increased production quantity.</p> <p>(2) EM441 Install/Mission Kits: BQM-177A Mission Kits are required to support fleet operations and are used to replicate various threats. Mission kit quantities vary depending on fleet test & evaluation training requirements and are not procured on a one for one basis with air vehicle quantities. The kit procurements are based on a projection of the user demand which is based on the mission profiles required for specific test objectives. Each type of kit is priced differently so the total costs of the kits is not a direct reflection on the quantity of kits being procured. LRIP I & II options were pre-priced in 2012 before development was complete. FY 2020 production costs are based on actuals and are expected to be slightly higher than inflation.</p> <p>(3) EM442 BQM-177A Other Hardware and Modifications: Funding supports hardware procurements, modifications and other production improvements and Engineering Change Proposals (ECPs) to help subsonic targets keep pace with emerging threats. The total cost may vary from year to year as it depends on the Warfighter and Training demands and costs of the modifications and ECPs. FY 2019 will fund Radome procurement, Power Management Conditioning Unit modifications, and any modifications that arise from completed payload integration flight testing and DT-B2 testing. LRIP I & II options were pre-priced in 2012 before development was complete. FY 2020 production costs are based on actuals and are expected to be slightly higher than inflation.</p> <p>(4) EM701 Subsonic ground equipment includes peculiar support equipment and flight presentation consumables. LRIP I & II options were pre-priced in 2012 before development was complete. FY 2020 production costs are based on actuals and are expected to be slightly higher than inflation.</p>

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

ID Code (A=Service Ready, B=Not Service Ready) :		MDAP/MAIS Code:
<p>(†) indicates the presence of a P-5a</p> <p>Footnotes:</p> <p>(9) EM203 GQM-163A unit costs reflect ladder step pricing. \$6.5M of FY 2020 Enduring Requirements OCO funds are to procure 1 GQM-163A target in support of the Formidable Shield exercise.</p> <p>(10) EM204 GQM-163A Boosters were broken out separately commencing in FY 2018 because they are not produced by the OEM and are contracted via different activities. Including the Boosters in the Target cost element, EM203, was artificially skewing the unit cost.</p> <p>(11) EM443 Hardware Modifications support engineering change proposals and other modifications necessary to ensure supersonic targets keep pace with emerging threats. These costs were originally included in the EM203 GQM-163A targets cost element but were broken out commencing in FY 2018 because they are contracted via different means and were artificially inflating unit costs of the GQM-163A targets. The cost and type of hardware modifications vary from each FY depending upon current threats, and fleet test and training requirements.</p> <p>(12) EM442 Install/Mission Kits: Mission kit quantities vary depending on fleet test & evaluation training requirements and are not procured on a one for one basis with air vehicle quantities. The kit procurements are based on a projection of the user demand which is based on the mission profiles required for specific test objectives. Each type of kit is priced differently so the total costs of the kits is not a direct reflection on the quantity of kits being procured. The varying demand and cost of the mission kits accounts for the increases and decreases of this cost element from year to year.</p> <p>(13) EM702 Ground Equipment includes peculiar support equipment and flight presentation consumables. Costs increase commencing in FY 2020 and FY 2021 with GMQ-163A quantity increase.</p> <p>(14) Long lead component funds are required for the procurement of D6AC steel for production of GQM-163A ducted rocket housings. The FY 2019 long lead procurement is for the FY 2020 target buy.</p> <p>(15) Cost Code EM853 were FY19 OCO funds sent to the Aerial Targets Line Item to be executed in support of 6th Fleet Formidable shield exercise for procurement of one Aegis Readiness Assessment Vehicle (ARAV) target, not a GQM-163A target.</p>

Footnotes:

⁽¹⁶⁾ FRP10

⁽¹⁷⁾ The maximum production rate is currently limited to 24 units due to the availability of Government Furnished Property (GFP) and OEM limitations. The program is exploring GFP alternatives in order to increase the maximum procurement rate to 32 units per year.

⁽¹⁸⁾ FRP11 includes a base plus pre-negotiated options for the following two production lots (FRP12 and FRP13).

⁽¹⁹⁾ FRP12 was a pre-negotiated option that is negotiated in conjunction with the FRP11 contract.

⁽²⁰⁾ FRP13 was a pre-negotiated option that is negotiated in conjunction with the FRP11 contract.

⁽²¹⁾ FY 2020 Enduring Requirements OCO funds recieved to procure one GQM-163A target in support of the Formidable Shield Exercise

(‡) Delivery rows marked with this symbol indicate that they are funded through a separate Line Item. See the respective components' exhibits for details, including the full delivery schedule.

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Footnotes:

⁽¹⁷⁾ The maximum production rate is currently limited to 24 units due to the availability of Government Furnished Property (GFP) and OEM limitations. The program is exploring GFP alternatives in order to increase the maximum procurement rate to 32 units per year.

⁽²²⁾ FY 2020 funding totals include \$61.4M for OCO for Base Requirements (quantity of 17) and \$6.5M for Direct War Overseas Contingency Operations (OCO) (quantity of one), total quantity of 18. The \$61.4M Base funding was realigned as part of the OCO funding IAW Department's compliance with the Budget Control Act of 2011.

ID Code (A=Service Ready, B=Not Service Ready) :		MDAP/MAIS Code:
<p>⁽²³⁾ EMA11 QF-16 FSAT Production funds the Boeing F-16 contract at Eglin AFB and is not indicative of true unit costs of one QF-16 target. The quantities and price purchased via contract varies per year and is based on the procurement agreement between the United States(US) Navy and the US Air Force. The total cost of the QF-16 target includes EMA12 QF-16 Hardware/ regeneration efforts as well.</p> <p>⁽²⁴⁾ EMA12 QF-16 Hardware funds the regeneration of drones and engines; including the parts and associated support. The regeneration costs can vary per year based on the amount of needed modernization, however, it is proportional to the number of units procured. This includes the costs of regeneration efforts at US Air Force AMARG and Edwards AFBs and is included in the total flyaway cost of the QF-16 targets. Hardware also includes the procurement of equipment for range operations at Pt Mugu. FY 2020 hardware costs increase slightly more than inflation due to increased projected Pt Mugu operations, costs of equipment needed, and other associated hardware.</p>

Description:

FY 2020 funding totals include \$0.0M for Base and \$20M for Overseas Contingency Operations (OCO); of which \$20M and 30 quantity is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

This program is a new start in FY 2020. The Drones and Decoys Line Item (LI) supports the air-launched electronic warfare (EW) systems capability; through the integration of a Navy variant of the Miniature Air Launched Decoy (MALD). EW is an integral war-fighting effect supporting combatant commander integrated priorities, as well as Joint or Coalition operations. EW systems influence, deceive, disrupt, degrade, deny and destroy threats throughout the electromagnetic spectrum to airborne and air-launched systems and their operations. EW includes air-launched electronic attack (EA) as well as elements of electronic support (ES) and electronic protection (EP). EA provides self-protection capabilities to other weapon systems through active and passive measures that deceive threats to airborne and air-launched systems and their operations by using kinetic and non-kinetic means to defeat threats that rely on the electromagnetic spectrum (Radio Frequency (RF), Electro-Optical (EO), Infrared (IR). The ES capabilities support the collection, analysis, and dissemination of information related to the detection, geo-location, characterization, and identification of threats to airborne and air-launched systems and their operations. An air-launched EW system with stand-in capability increases the range and duration of EW systems while providing flexibility to commanders for employment.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:
This BLI supports the Navy variant of the Miniature Air Launched Decoy (MALD). FY 2020 funding is for the procurement of 30 MALD-N's, containers, cables and associated support. The FY 2020 assets will provide an Early Operational Capability (EOC) delivery in FY 2021, which will allow the fleet to begin tactics development and training activities.

MALD is integral to realizing the National Defense Strategy of combat-credible military forces to deter war, protect the security of our nation and to enable the Joint Force to win should deterrence fail. The development and acquisition of MALD has been structured to be fielded at a pace relevant to maintain overmatch against long-term strategic competition. Specifically MALD directly contributes to building a more lethal force and is a critical enabler for joint lethality in contested environments; deterring adversaries from aggression and evolves innovative operational concepts.

Description:

FY 2020 funding totals include \$0.0M for Base and \$3.388M for Overseas Contingency Operations (OCO); of which \$3.388M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

The MK-41 Vertical Launching System (VLS) is a surface combatant missile launching system designed to store, select, and launch various Standard Missile configurations, Tomahawk, Tactical Tomahawk, Evolved Seasparrow (ESSM) and Vertical Launch Anti-Submarine Rocket (ASROC) (VLA) missiles. The MK-41 VLS significantly improves missile capacity, flexibility, multi-mission capability, reaction time, rate of fire, and is designed to be adaptable to present and future weapon systems. Current configurations are: two 61 cell launchers (forward and aft) for 22 TICONDEROGA (CG 47) Class Cruisers beginning with CG-52, one 61 cell aft and one 29 cell launcher forward for 28 ARLEIGH BURKE (DDG 51) Class Destroyers, one 64 cell launcher aft and one 32 cell launcher forward for 34 DDG 51 FLT IIA ships.

[P5 / CANISTER EQUIPMENT]: Funds procurement and installation of canister and gas management hardware Engineering Change Proposals (ECPs) and Ordnance Alterations (ORDALTs).

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:
 Funds are required for production support and Integrated Logistics Support (ILS) including: supply support, provisioning and technical documentation in support of weapon stations, All Up Round (AUR) facilities, and the fleet. Funds also provide for development and procurement of critical Engineering Change Proposals (ECP) and Ordnance Alterations (ORDALT) that improve reliability and implement safety upgrades for MK-41 VLS canisters and gas management hardware. Availability of upgraded canisters, canister hardware, and gas management hardware directly impacts fleet loadouts, operational availability, and safety.

FY 2020 funding totals include \$0.0M for Base and \$143.2M for Overseas Contingency Operations (OCO); of which \$143.2M and 48 quantity is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

Long Range Anti-Ship Missile (LRASM) is Increment 1 of the Offensive Anti-Surface Warfare (OASuW) weapon development program. LRASM will be a key air launched component of the Navy's overall Cruise Missile Strategy. The Department has transitioned the Defense Advanced Research Projects Agency (DARPA) / Office of Naval Research (ONR) LRASM demonstration design into a fielded weapon system which supports an increased offensive strike capability with an Early Operational Capability (EOC) for U.S. Air Force B-1 and U.S. Navy F/A-18E/F. In response to U.S. Pacific Command Urgent Operation Need (UON) statement, LRASM is intended to provide the first increment of the next generation ASuW capabilities addressing the most urgent air-launched requirement, significantly reducing joint force warfighting risks, and positioning the Department to address evolving surface warfare threats. LRASM is integral to realizing the National Defense Strategy of combat-credible military forces to deter war, protect the security of our nation and to enable the Joint Force to win should deterrence fail. The development and acquisition of LRASM has been structured to be fielded at a pace relevant to maintain overmatch against long-term strategic competition. Specifically, LRASM directly contributes to building a more lethal force and is a critical enabler for joint lethality in contested environments; deterring adversaries from aggression; ensuring common domains remain open and maintaining favorable regional balances of power.

The U.S. Air Force procurement for LRASMs in FY 2017 through FY 2019 at the following quantities:

FY 2017 - 19 (Lot 1)

FY 2018 - 16 (1 unit was priced at and part of FY 2017 Lot 1 to achieve 20 total Air Force units in Lot 1; 15 units are with FY 2018 Lot 2 procurement)

FY 2019 - 15 (Lot 3)

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:
FY 2020 funding procures a total of 48 Long Range Anti-Ship Missiles (LRASM).

LRASM development/fielding is funded to focus on meeting the time-critical requirements, while accepting manageable levels of technical risk, and is utilizing the DoD Instruction 5000.02 Model 4 Accelerated Acquisition process to achieve speed to the fleet. The program's funding profile was developed to enable fielding at the time required by the warfighter. Due to the accelerated nature of the program's acquisition strategy, volatility in the funding profile has an intensified impact on the program's ability to meet the early operational requirements, and any reduction in funding will increase risk to fielding the required capability at the specified time.

(‡) Delivery rows marked with this symbol indicate that they are funded through a separate Line Item. See the respective components' exhibits for details, including the full delivery schedule.
 "A" in the Delivery Schedule indicates the Contract Award Date.
Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Footnotes:
⁽⁵⁾ FY 2017 Initial Procurement Lead Time represents time from award to delivery of first Air Force AUR (Sep-18) to meet B-1B EOC; followed by delivery of Navy AURs to meet F/A-18 EOC (FY19).
⁽⁹⁾ Air Force Lot 1 procurement is 20 actual units - FY 2017 dollars procured 19 units, FY 2018 dollars procured 1 unit. Navy Lot 1 procurement is 14 units; Lot 2 procured 1 unit with FY17 dollars. Lot 1 procurement consisted of three separate awards, extending the funded delivery until February 2020.

Description:

FY 2020 funding totals include \$0.0M for Base and \$38.137M for Overseas Contingency Operations (OCO); of which \$38.137M and 18 quantity is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

The Over The Horizon (OTH) missile provides the Littoral Combat Ship/Frigate (LCS/FFG(X)) with long range anti-surface offensive capability against surface combatants.

The OTH Weapon Systems (WS) consists of a Missile Launch System and a complement of missiles.

- Missile Launch System components include: a Launch Mechanism, Operator Interface, and Fire Control System which are procured with Other Procurement, Navy Funds.

- Missile components include a missile encased in a firing canister (encanistered missile). An encanistered missile consists of a flight vehicle that is mechanically and electrically connected within a weapon canister. The flight vehicle's major components are operationally joined, consisting of a warhead (explosive), propulsion system, guidance system, initiation system, and other components. The weapon canister is a mechanical structure with electrical interconnections that is used to support and restrain the flight vehicle during loading and unloading operations. The weapon canister allows the flight vehicle to mechanically and electrically connect to the Missile Launch System without being exposed to the environment.

Justification:

Over The Horizon Missile base funding is required to support Over The Horizon Weapon System program for the Littoral Combat Ships. The program provides a long range anti-surface offensive capability to improve the ship's ability to defend against enemy surface ships.

FY 2020 funds will be used to procure 18 Over The Horizon missiles encased in a firing canister, an increase from 8 missiles in FY 2019.

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

FY 2020 funding totals include \$0.0M for Base and \$128.059M for Overseas Contingency Operations (OCO); of which \$128.059M and 60 quantity is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

The Evolved SEASPARROW Missile (ESSM) Program is an international cooperative effort among ten NATO SEASPARROW nations (Australia, Canada, Denmark, Germany, Greece, Netherlands, Norway, Spain, Turkey, and the U.S.) established to design, develop, test, produce and provide in-service support to a new and improved version of the SPARROW missile (RIM-7P) with the kinematic performance to defeat current and projected threats that possess low altitude, high velocity and maneuver characteristics beyond the engagement capabilities of the RIM-7P. ESSM consists of Blk 1 and Blk 2 missile upgrades.

ESSM Blk 1 provides crucial defense battlespace and fire power against the fast, low altitude, highly maneuverable Anti-Ship Cruise Missile (ASCM) threat. Modifications were made to both the MK 41 Vertical Launch System (VLS) to fire from a single cell with 4 ESSM (QuadPack) and the NATO SEASPARROW Surface Missile System (NSSMS), fielding ESSM Blk 1 onboard CVN 68, LHD 1, LHA 7, CG 47, and DDG 51 class ships. ESSM Blk 1 integration efforts continue to bring the capability to CVN 78 and DDG 1000. Testing scheduled for FY 2018 includes ESSM Blk 1 firings from the Self Defense Test Ship in support of DDG 1000 class integration, AEGIS B/L 9C2 live fire testing, and Combat Systems Ship Qualification Trials live fire tests aboard CVN 72 and LHD 2. The ESSM Blk 1 has been in production since 2004 and will complete with the delivery of MYP16-17 procurement in FY 2019. The production line will cease to exist in the 2019-2020 timeframe making ESSM Blk 1 unique sections (Guidance Sections and Transition Sections) unaffordable. PEO IWS 12 is working on a plan to procure depot level repair parts needed to sustain the ESSM Blk 1 inventory through its planned end of life (~2040).

ESSM Blk 2 upgrade replaces the largely obsolete guidance section with a dual mode Active/Semi-Active X-Band seeker capable of defeating future threat capabilities within the existing envelope, including; smaller signatures, increased raid sizes, and adverse environments including countermeasures. Threat types include: advanced ASCMs, Anti-Ship Ballistic Missiles, surface and asymmetrical. Two ESSM Blk 2 Controlled Test Vehicle flight tests were successfully conducted in June 2017 onboard the Self Defense Test Ship at the Point Mugu Sea Range. Successful GTV-1 in June 2018. GTV-2 completed Oct. 2018. GTV-3 scheduled to occur by Q3 FY19. The ESSM Blk 2 Milestone C decision is scheduled for Q2 FY 2019 with Initial Operational Capability for AEGIS platforms scheduled for 2020 and SSDS platforms in 2023. ESSM Blk 2 Low Rate Initial Production deliveries are expected to begin in 2020 with Full Rate Production rounds delivering to the Fleet in 2023.

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

FY 2020 funding totals include \$0.0M for Base and \$25.447M for Overseas Contingency Operations (OCO); of which \$25.447M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

The Harpoon Block II+ (HII+) retrofit kit procurement provides the Department of Navy (DoN) with an enhanced tactical navigation and targeting selectivity capabilities over the legacy Harpoon Block IC (HIC) inventory. Harpoon Block II+ is a Network Enabled, Air-Launched, Anti-ship Cruise missile with the ability to receive in-flight targeting updates, improving target selectivity and the engagement of moving maritime targets. Additionally, the system utilizes the Global Positioning System to provide in-flight updates coupled with an active radar seeker for accurate targeting. The program procurement budget keeps pace with evolving enemy threats by providing a network enabled, anti-ship cruise missile capability, which compliments the attributes of associated launch platforms. The survivability of the HII+ is increased over the HIC due to the upgrade retrofit kit, increasing the lethality of the weapon system. The DoN's planned procurement modifies legacy HIC with the retrofit kits, to include procurement of Captive Air Training Missiles (CATMs), increasing the Anti-Surface Warfare capabilities of Fleet Forces. The acquisition strategy includes the harvesting and software reprogramming of data links from existing weapons inventories to support the HII+ modification/production effort.

The Encapsulated (ENCAP) Harpoon Block IC (HIC) missiles provides Navy Los Angeles-class nuclear attack submarines (SSN) a sub-launched, all-weather, long-range Anti-Surface Warfare (ASuW) missile to attack enemy warships at stand-off ranges, to include Surface and Amphibious Action Groups. The ENCAP Reconstitution Program will refurbish and recertify 60 existing ENCAP HIC all-up rounds from deep storage to an "as-new" war-ready material condition (ENCAP Harpoons were placed in deep storage in 1996). The controlled storage conditions achieved by the missile capsule have preserved the material condition of the weapon system, allowing for relatively quick recertification and reissue. Due to the ease and speed of missile recertifications the ENCAP HIC Reconstitution Program will fill a critical, time sensitive ASuW capability gap and meet Speed to the Fleet requirements.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:
 FY 2020 provides funding to procure 70 Harpoon Block II+ kits and 9 Captive Air Test Missiles (CATMs). HII+ CATMs will provide fleet operators with loading, handling and flight employment training. The Harpoon Block II+ retrofit kit program to the Harpoon Block 1C inventory supports DoD strategic goals by improving the capabilities and lethality of existing weapons systems at minimal cost. Furthermore, the Harpoon Block II+ will enhance the Anti-Surface Warfare capabilities of Fleet Forces, by providing increased reliability, target selectivity, and improved survivability over current systems. FY 2020 budget contains \$0.8 million to fund ENCAP Harpoon Reconstitution Program. Active radar seeker procurements planned to begin in FY 2021 have been removed.

- Footnotes:**
- (1) FY20 quantities increase associated with fleet training requirements.
 - (2) Funds required for non-recurring engineering to complete production testing and qualification.
 - (3) The acquisition strategy includes software reprogramming of data links from existing weapons inventories to support the Harpoon Block II+ (HII+) modification/production effort.
 - (4) The acquisition strategy includes the harvesting of data links from existing weapons inventories to support the Harpoon Block II+ (HII+) modification/production effort.

Description:

FY 2020 funding totals include \$0.0M for Base and \$183.74M for Overseas Contingency Operations (OCO); of which \$183.74M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

AGM-88E Advanced Anti-Radiation Guided Missile (AARGM) is an ACAT-1C acquisition program to upgrade the Legacy AGM-88 High Speed Anti-Radiation Missile (HARM) with multi-mode guidance and enhanced targeting capability. The AARGM program will integrate multi-mode guidance (passive Anti-Radiation Homing (ARH)/active Millimeter Wave (MMW) Radar/Global Positioning system (GPS)/Inertial Navigation System) on the HARM AGM-88 missile. The AARGM weapon system capabilities include: active MMW terminal guidance, counter shutdown, expanded threat coverage, enhanced ARH receiver, Weapon Impact Assessment (WIA) transmission prior to detonation, GPS point-to-point weapon navigation, and weapon employment with impact avoidance zone/missile impact zones. AARGM AGM-88E production units possess the capability to engage targets in the Destruction of Enemy Air Defenses (DEAD) mission area and will be able to destroy non-traditional and Overseas Contingency Operation (OCO) targets. AARGM is a cooperative program between the Department of Defense of the United States of America and the Ministry of Defense of the Republic of Italy.

The Advanced Anti-Radiation Guided Missile Extended Range (AARGM ER) upgrade includes hardware and software improvements to AARGM's operational capabilities, including extended range, survivability, and effectiveness against complex, new and emerging threats.

Description:

AARGM is an ACAT-1C acquisition program to upgrade the Legacy AGM-88 HARM missile with multi-mode/multi-spectral guidance and enhanced targeting. Full-Rate Production (FRP) decision was granted on 4 September 2012. FRP Lot 7 contract funded with FY 2018 was awarded 3Q FY 2018 with deliveries commencing in April 2020.

ID Code (A=Service Ready, B=Not Service Ready) :					MDAP/MAIS Code:		
Modification Item 1 of 1: HARM Mods (AARGM)							
Manufacturer Information							
Manufacturer Name: Northrup Grumman Corporation Innovation Systems ⁽¹¹⁾					Manufacturer Location: Northridge, CA		
Administrative Leadtime (in Months): 8					Production Leadtime (in Months): 23		
Dates	FY 2018	FY 2019	FY 2020	FY 2021	FY 2022	FY 2023	FY 2024
Contract Dates	May 2018	May 2019	May 2020	May 2021	May 2022	May 2023	
Delivery Dates	Apr 2020	Apr 2021	Apr 2022	Apr 2023	Apr 2024	Apr 2025	

Footnotes:

- (1) Cost Element 1.1.1 AUR Installation kits budget reflects requirements and updates based on contract actuals, adjusting quantity and unit costs.
- (2) Cost Element 1.1.2 CATMs budget reflects requirements and updates based on contract actuals, adjusting quantity and unit costs. CATMs are based on the analysis of operational fleet training requirements.
- (3) Cost Element 2.2 Telemetry Sections provide the data required to assess flight testing and provide the flight termination capability required for range safety during live firings on United States Navy ranges. Funding is required to meet Noncombat Expenditure Allocation (NCEA) requirements. Increase in Telemetry Sections from FY19 to FY20 is to ramp up in quantities in order to meet the NCEA requirements.
- (4) Cost Element 2.3 Support equipment includes Common Munitions Bit/Reprogramming Equipment (CMBRE), unique support equipment, and radome covers.
- (5) Cost Element 2.4 Engineering change orders (ECO) are used for the Cost Improvement Initiatives (CII), safety, and engineering change proposals (ECPs) to add capability, reduce missile cost and improve production. Increase in ECO from FY19 to FY20 is to account for four configuration changes to the AARGM missile in order to increase capability on the weapon to be able to prosecute complex emitters.
- (6) Cost Element 2.5 Production Engineering Support (PES) reflect field activity requirements as stated in the approved FRP decision.
- (7) Cost Element 2.7 Integrated Logistics Support (ILS) budget line supports costs of maintenance, supply support, support equipment management, computer resources support, training and training support, ILS program management, and Packaging, Handling, Storage and Transportation (PHS&T).
- (8) Cost Element 2.8 Other Production Support (OPS) includes prime contractor production support and recurring fixed costs that are required per lot. Funding profile for OPS reflect requirements and updated based on contract actuals.
- (9) Cost Element 2.9 Special Tooling/Special Test Equipment (ST/STE) for production facilitization includes rate tooling to meet production ramp each year as well as planning, building, installing, maintaining, calibrating, repairing and replacing of ST/STE and production equipment.
- (10) Cost Element 2.10 Diminishing Manufacturing Sources (DMS) added to comply with Congressional direction, H.R. 933. DMS funding includes life-of-type buys due to obsolescence parts and components and other obsolescence issue resolutions. Funding reflects the programs projected obsolescence issues and can vary from year to year.
- (11) Orbital ATK renamed Northrop Grumman Corporation Innovation Systems.

Description:

The Advanced Anti-Radiation Guided Missile Extended Range (AARGM ER) upgrade includes hardware and software improvements to AARGM's operational capabilities, including extended range, survivability, and effectiveness against complex, new and emerging threats. Planned Initial Operating Capability (IOC) is 4Q FY 2023. The AARGM ER Low Rate Initial Production 1 is expected to award in 3Q FY 2021 with expected deliveries beginning in 2Q FY 2023.

Description:

FY 2020 funding totals include \$0.0M for Base and \$22.5M for Overseas Contingency Operations (OCO); of which \$22.5M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

SM-2 BLK IIIAZ: The DDG 1000 Standard Missile program of record plan is to procure SM-2 BLK IIIAZ modifications to support deployment of DDG 1000 Class Ships. This line item provided funds to procure SM-2 modification kits to support the DDG 1000 program. FY 2017 was the first year for SM-2 BLK IIIAZ procurement. FY 2017 - 2018 funding supported procurement of Standard Missile modifications to provide SM-2 BLK IIIAZ missiles for DDG 1000 Standard Missile in-service inventory requirement. Funding included modification kit installation in SM-2 BLK IIIA rounds. SM-2 BLK IIIA AEGIS missiles require hardware and software changes to be compatible with the new (non-AEGIS) DDG 1000 radar, combat system, X-band link and interrupted continuous wave illumination. Outyear funding provides round delivery support.

SM-2 BLK IIIC: On 3 November 2017, SM-2 BLK IIIC was designated an accelerated acquisition Maritime Accelerated Capabilities Office (MACO) program by the CNO and ASN(RDA), enabling procurement of a SM-2 medium range active capability beginning in 2021. SM-2 BLK IIIC provides enhanced stream-raid performance against numerous threats via target resolution and missile/target pairing logic, over-the-horizon capability for increased depth of fire, enhanced capability against electronic attack, improved firepower due to decreased dependence on illuminators, and enhanced fuzing via guidance integrated fuzing. Effort leverages to the maximum extent existing SM-2 inventory and common technology to provide an affordable mix of complimentary weapons to meet a broad range of mission requirements. The inventory objective is 1,000 units.

SM Data Link Electronics Assembly: The SM Data Link Electronics Assembly (designated as "Plate 3A") refresh. The Plate 3A is a legacy SM-2 design used on Standard Missile variants. Over the past several years the Plate 3A has experienced parts obsolescence issues that cannot be resolved with low-cost life-of-type buys or minor redesigns. Funding will qualify MDA's new Digital Data Link (DDL) design to provide a functionally equivalent drop-in replacement assembly with updated technology for use in Navy STANDARD Missile. DDL's software defined radios will provide significant inherent additional performance capability, if desired, in the future.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:
 The FY20 funding request was changed to realign the start of SM-2 BLKIIIC procurement to FY21. In FY 20, \$20M is retained for STANDARD Missile Data Link Electronics Assembly (Plate 3A) refresh. An additional \$2.5M of FY 2020 funding for SM-2 IIIAZ will procure spare guidance sections and telemetry, and provide round design agent and field activity engineering services to support round delivery. The increase between FY19 and FY20 reflects the completion of SM-2 BLKIIIAZ modification kit procurement in FY18 and further requirements/funding availability not beginning until FY20.

 The FY2020 funding request was also reduced by \$6.607M to account for the availability of prior year execution balances.

Description:

FY 2020 funding totals include \$0.0M for Base and \$1.958M for Overseas Contingency Operations (OCO); of which \$1.958M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

The Weapons Industrial Facility (WIF) program supports the following NAVSEA Government-Owned Contractor Operated (GOCO) facilities; the active Naval Industrial Reserve Ordnance Plant (NIROP) Allegany Ballistics Laboratory (ABL), Rocket Center, WV, and inactive Naval Weapons Industrial Reserve Plant (NWIRP), Bedford, MA. The budget provides funding for NIROP ABL to recapitalize aging plant infrastructure; enable process improvement to reduce life cycle cost for manufacturing and production of weapon systems; resolve life, safety, and environmental issues; and enact immediate operational support of National Security needs. Capital-type rehabilitation projects at NIROP ABL support weapon systems such as Long Range Land Attack Projectile (LRLAP), Rolling Airframe Missile (RAM), Evolved Sea Sparrow Missile (ESSM), AIM-9X Sidewinder Missile, AIM-9M Sidewinder Missile, FMU-143 Penetrating Bomb Fuze System, Hellfire Missile, Guided Multiple-Launch Rocket System (GMLRS), Advanced Medium-Range Air-to-Air Missile (AMRAAM), Tomahawk GG and Trident GG.

[P5 / FU002 Capital Type Rehabilitation]: This program funds projects that eliminate environmental and safety deficiencies in compliance with local, state, and federal OSHA regulations. These regulations mandate requirements, which must be met if plant shuts down in order to avoid criminal liability, and severe financial penalties. The program also includes critical upgrades to maintain high liability areas such as fire and security systems, roofs, boilers, electrical distribution systems, bridge crane systems, and other structural repairs essential to maintain the industrial integrity of the plant.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:
 Funding is required to address critical infrastructure issues. The plants have an average age of 45 years and lack of proper maintenance will limit capabilities to maintain scheduled production rates and overall productivity.

Funding for FY 2020 will support the installation of an Explosive Storage Magazine at NIROP ABL to address the increased storage requirements of energetics materials.

Description:

FY 2020 funding totals include \$0.0M for Base and \$67.38M for Overseas Contingency Operations (OCO); of which \$67.38M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

The Mobile User Objective System (MUOS) provides a worldwide, multi-service population of mobile and fixed-site terminal users with ultra-high frequency (UHF), narrowband, and beyond line-of-sight satellite communications (SATCOM).

MUOS significantly increases performance and capacity in support of critical Combatant Command SATCOM priorities. MUOS is the replacement system for the UHF Follow-on (UFO) system, which is currently beyond its design life. MUOS consists of Space, Ground, and User Entry Segments.

The Space Segment consists of 5 geosynchronous satellites, one of which is an on-orbit spare, and provides both a legacy UHF payload, which is backward compatible with UFO, and a Wideband Code Division Multiple Access (WCDMA) payload, which provides 3G cellular-like capability.

The Ground Segment or System consists of four world-wide Radio Access Facilities (RAFTs) (Wahiawa, Hawaii; Northwest Chesapeake, Virginia; Niscemi, Italy; and Geraldton, Australia) and two Satellite Control Facilities (Port Hueneme, California and Schriever Air Force Base (AFB), Colorado). Each RAF includes three 60 ft. antennas, and over 50 equipment racks which house a total of 5,000 major hardware components and 250 software applications across the MUOS Program. The RAF in Hawaii includes a Network Management Facility (NMF). The RAFTs in Hawaii and Virginia each include a Switching Facility (SF). All four RAFTs and two Satellite Control Facilities are considered Ground Sites.

The User Entry Segment consists of the MUOS waveform that is ultimately integrated into MUOS-capable terminals. The MUOS legacy capability has been in operational use since 2012, and the WCDMA capability transitioned to Early Combatant Command Use in July 2016.

In addition to providing UHF SATCOM for the Department of Defense (DoD), the Navy has the overall responsibility to deliver the end-to-end (E2E) MUOS capability to the warfighter. This responsibility involves systems engineering, integration, and test management of all MUOS system of system activities, to include the integration of the MUOS waveform into MUOS-capable terminals and the subsequent terminal certification testing.

Based on the results of the Multi-Service Operational Test and Evaluation-2 (MOT&E-2) in June 2016, Director, Operational Test & Evaluation (DOT&E) assessed MUOS not operationally effective or suitable. As a result, the program has been addressing the findings and preparing for MOT&E-2B in FY19 and Full Operational Capability (FOC) in FY20. MOT&E-2B is scheduled to start in May 2019 and complete in August 2019. Current FOC estimate is Dec 2019 following receipt of the MOT&E-2B test report.

Beginning in FY17, the MUOS program's focus has been upgrading all four Radio Access Facilities and two Satellite Control Facilities to address ongoing cybersecurity threats, hardware and software obsolescence, and operational deficiency issues.

Justification:
 The FY20 funding will address obsolescence and cybersecurity vulnerabilities within the MUOS Ground Segment as the system transitions to Full Operational Capability. In FY20, 93% of the hardware (HW) and 94% of the software (SW) will be obsolete, based on current funding levels for FY19. Emerging cybersecurity threats and increasing cybersecurity requirements have resulted in a high number of category I/II cybersecurity vulnerabilities, many of which are directly attributable to obsolescence. Denial of service threats against UHF SATCOM systems have evolved over the past 10 years and continue to proliferate in the UHF spectrum. Implementing Electromagnetic Interference (EMI) mitigations in the MUOS Ground System will ensure the system meets its capacity and link availability requirements.

In FY 2018 and FY 2019 this program has received Congressional reductions of \$6.8M and \$6.5M, respectively, due to ground system updates excess growth. Further reductions to this program will impact the program's technical refresh and obsolescence strategy. Procurement of obsolete hardware and software end items would be reduced and correction of cybersecurity vulnerabilities would be deferred, consistent with the amount of the reduction.

The increase in FY20 funding for MUOS Upgrade Mod Kits from FY19 is due to initial procurement of Electromagnetic Interference (EMI) mitigation hardware upgrade. Ground System updates across the FYDP include HW and SW procurements to correct HW/SW deficiencies. Funding is for 6 Technical Insertion Upgrades and 2 Upgrade Mod Kits for each of the six ground sites in each fiscal year through the FYDP. The technical insertion deployment addresses ground system defects which includes associated engineering, integration, test and delivery efforts to address cybersecurity vulnerabilities, and correct issues to ensure readiness levels support the warfighter narrowband SATCOM requirements. The upgrade mod kits include ground system defect resolution as well as addressing HW/SW degradation. Obsolete items being replaced in each fiscal year include DSN Gateway, High Assurance Internet Protocol Encryptors (HAIZE), and back up tape drives/storage arrays.

The quantity of defects is expected to ramp down in FY21, after corrections are made as a result of the MOT&E-2B findings.

Description:

[MUOS Technical Insertion Upgrades] Funding is for 6 defect resolution deployments to each of the six Ground sites in each fiscal year throughout the FYDP. The software upgrades are part of a phased technical insertion. The technical insertion is installed into the hardware housed at each ground site as part of the operational end item requirements of MUOS. The defect resolution deployment addresses ground system defects which includes associated engineering, integration, test and delivery efforts to address cybersecurity vulnerabilities, and correct issues to ensure readiness levels support the warfighter narrowband SATCOM requirements.

[MUOS Upgrade Mod Kits] Production upgrades of MUOS Mod Kits include defect resolution as well as addressing HW/SW obsolescence issues. Obsolete items being replaced in each fiscal year include DSN Gateway, High Assurance Internet Protocol Encryptors (HAPE), back up tape drives/storage arrays, and Electromagnetic Interference (EMI) mitigation equipment.

[MUOS Tech Refresh] Funding is for engineering analysis of obsolete hardware and software required to determine the necessary upgrade options for HW/SW. Integration and testing of the upgrade options are being done to address system deficiencies.

Footnotes: (1) 1. For both the MUOS Technical Insertion Upgrades and the MUOS Upgrade Mod Kits, the quantity of 6 represents the number of MUOS ground sites not the quantity being procured in any given year. The 6 ground sites receiving upgrades across the FYDP are Wahiawa, HI; Northwest Chesapeake, VA; Niscemi, IT; Geraldton, AU; Port Hueneme, CA; and Schriever AFB, CO. 2. For both the MUOS Technical Insertion Upgrades and the MUOS Upgrade Mod Kits, the unit cost varies each fiscal year due to the unique configuration of hardware and software requirements needed to address cybersecurity and lifecycle management issues at each of the 6 ground sites. 3. The 6 ground sites will each receive 6 MUOS Technical Insertion Upgrades (total of 36) and 2 MUOS Upgrade Mod Kits (total of 12) during each fiscal year. 4. Increase in FY20 funding for MUOS Upgrade Mod Kits from FY19 is due to initial procurement of Electromagnetic Interference (EMI) mitigation hardware upgrade.

Description:

FY 2020 funding totals include \$0.0M for Base and \$109.427M for Overseas Contingency Operations (OCO); of which \$109.427M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

Description:

FY 2020 funding totals include \$0.0M for Base and \$5.561M for Overseas Contingency Operations (OCO); of which \$5.561M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

The Surface Ship Torpedo Defense (SSTD) provides a layered torpedo defense capability to protect surface ships. Under the WPN appropriation, SSTD is comprised of the Surface Acoustic Device Countermeasures (ADCs) and Countermeasure Anti-Torpedo (CAT). The CAT provides canisterized Anti-Torpedo (ATT). The SSTD WPN account currently procures surface ship ADCs. The ADC is a 3-inch expendable torpedo countermeasure (CM) that provides an over-the-side soft-kill defense against threat torpedoes. WPN funding provides new devices for fleet inventory requirements as identified in Naval Munitions Requirements Process (NMRP) necessary to equip identified surface ships and to replace expiring devices. The funding will also procure and install ready service and deep storage lockers to provide adequate storage on surface ships with countermeasure allowance.

TD010 - ADC HARDWARE: Procures the surface ship ADCs. Quantity requirements determined by NMRP and shelf life of older units (reaching end of life). These requirements vary by ship type, location, and campaign.

TD020 - ADC READY STOWAGE LOCKER: Procure and install ready service and deep storage lockers to hold ADCs on surface ships.

TD830 - PRODUCTION ENGINEERING - In House: Funding provides specification preparation and validation, government prepared production acceptance procedures, production planning, Integrated Logistics Support (ILS) planning, coordination of government furnished information (GFI) and government furnished equipment (GFE), contract deliverable monitoring and prime contractor monitoring of cost/schedule performance. Also provides inservice engineering agent (ISEA) and technical direction agent (TDA) support for ADCs on surface ships.

TD900 - CONSULTING SERVICES: Funding under this cost code provides fair share of contractor support to the program office, including program, financial, acquisition, contract, administration and engineering management support.

TD905 - PRODUCTION ENGINEERING CONTRACTOR: Funding under this cost code provides for production engineering tasks performed by the hardware contractor.

Description:

FY 2020 funding totals include \$0.0M for Base and \$114M for Overseas Contingency Operations (OCO); of which \$114M and 58 quantity is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

The MK 48 Mod 7 Heavyweight Torpedo is the U.S. Navy's submarine launched Anti-Submarine Warfare (ASW) and primary Anti-Surface Warfare (ASuW) weapon. Procurements will increase warshot inventory available prior to Major Combat Operations. Heavyweight Torpedo provides the submarine force with an effective weapon against threat submarines and surface combatants to assist in achieving Sea Control and neutralizing or destroying threats to high value vessels. Torpedoes are the only proven weapon system that provides Navy control from sea bed to sea surface.

[P5 / G5001 - MK48 MOD 7 Hardware]: Funding under this cost code supports the award and execution of two competitive contracts for procurement of the MK48 Mod 7 Torpedo Guidance and Control and Afterbody Tail Cone Sections, production test equipment upgrades, engineering change proposals, and non-recurring engineering to resolve production issues including obsolescence. Nonrecurring Engineering (NRE) funds base contract year technology refresh due to obsolescence issues. NRE funds production of Proof of Manufacturing (POM) units, first article testing, tooling, test equipment, procurement of technical data package updates, and start-up costs for production contractors. Engineering Services and Engineering Change Proposals (ECPs) pay for studies, plans, design changes, and implementation of design changes by the contractor(s), primarily due to obsolescence that occurs during the contract performance. Also included in this cost code, is the cost of government installation and integration of MK 48 Mod 7 Guidance and Control and Afterbody Tail Cone Torpedo Sections procured in prior years with War Reserve MK 48 Mod 4 MK 107 Warhead components and Fuel Tanks assembled into an all up round(AUR). Installation costs match procurement delivery timelines. Quality assurance check-out is completed with the test and integration of operational software prior to issue of the MK 48 Mod 7 Torpedo as Warshot or Exercise Torpedo. Diminishing Manufacturing Sources (DMS) cost funds are provided to address obsolescence issues in the Guidance and Control (G&C) and After Body/Tail Cone sections during the production cycle. The contractors will be required to procure and deliver DMS material for these obsolete components.

[P5 / G5004 - Torpedo Other Procurement Investment]: Funding under this cost provides for additional Warhead electronics (new WES , Exploder, and Arming Device) and Fuel Tanks in FY 2021 to FY 2023 utilizing a new competitive MK48 Mod 7 G&C contract in order to replace the Warshot Fuel Tanks and Warhead Sections which were used by the MK48 Mod 7 Torpedo Program from FY 2016 to FY 2020 to assemble an All-Up-Round Torpedo.

[P5 / G5003 - Support and Ancillary Equipment]: Funding under this cost code provides procurement and maintenance of support, technology refresh of test equipment at Naval Undersea Warfare Centers (NUWC) Keyport (KPT) and Newport (NPT), and the contractor facility for assembly, testing and integration.

<p>[P5 / G5830 - Production Engineering]: Funding under this cost code provides for production tasks performed by NUWC NPT and KPT and includes review of contractor generated Engineering Change Proposals (ECPs), review and resolution of contractor failures and proposed corrective action, configuration management activities, contractor monitoring, risk analysis, technical problem resolution, software engineering, safety, integrated logistics support, environmental engineering, information systems, test equipment, software maintenance and updates, and refurbishment of notable test equipment to provide to the contractors. Funding maintains production specification in accordance with production processes, provides subject matter experts to support root cause analysis of failed contractor hardware, and monitors contractor defect and reduction processes to ensure deficiencies are effectively addressed. Funding is also provided for program office acquisition support.</p> <p>[P5 / G5840 - Quality Assurance]: Funding under this cost code provides for quality assurance (QA) tasks performed by NUWC Keyport (KPT) and Newport (NPT) including: QA review of the contractor and subcontractor data, review of documentation indicating conformity to product performance requirements, and review of objective quality evidence.</p> <p>[P5 / G5860 - Acceptance T&E]: Funding under this cost code provides for integration and production acceptance testing of prime contractor hardware sections in an MK 48 Mod 7 All Up Round (AUR) Torpedo.</p>

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:

FY 2020 Program changes:

Hardware - G5001 - MK48 MOD 7 Hardware Cost:

- (1.1.1 and 1.1.2) G&C and AB/TC Sections: Procurement quantity increases from 53 in FY19 to 58 in FY20 to support the Navy's requirement for additional warshot torpedoes available for Pre-Combat loadout (Pre-CLO).

- (1.1.3) Contractor Engineering Services / ECPs: Continued effort for the obsolescence redesign/technology refresh of the Warhead Electronics Section (WES) design. The WES was designed in the 1980's and the current hardware and software design is not supportable or procurable requiring redesign, integration and test. Without redesign of the WES the Program will not have the WES section that is required in support of the FY21 and beyond procurements and the Navy will not be able to assemble All Up Round warshots.

- (1.1.4) Installation: Provides funding for government installation and integration of MK 48 Mod 7 Guidance and Control and Afterbody Tail Cone Torpedo Sections procured in prior years per the P-21.

G5860 Acceptance Test & Evaluation:

- (6.1) Acceptance T&E: Increase in funding is required in FY20 for WES Proof of Manufacturing (POM) unit acceptance and testing in support of restart of warhead electronics section (WES) production.

Footnotes:

- (1) G5001:(1.1.1) Guidance & Control (G&C) Section FY 2020 funding increase for the procurement of 58 G&C Sections.
- (2) G5001: (1.1.2) After Body/Tail Cone FY 2020 funding increase for the procurement of 58 AB/TC Sections.
- (3) G5001: (1.1.4) Installation: Provides funding for government installation and integration of MK 48 Mod 7 Guidance and Control and Afterbody Tail Cone Torpedo Sections procured in prior years per the P-21.
- (4) G5860: (6.1) Acceptance T&E: Increase in funding is required in FY20 for WES Proof of Manufacturing (POM) unit acceptance and testing in support of restart of warhead section electronics production.

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

FY 2020 funding totals include \$0.0M for Base and \$15.095M for Overseas Contingency Operations (OCO); of which \$15.095M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

The MK-39 MOD 3 Expendable Mobile ASW Training Target (EMATT) is a small self-propelled underwater vehicle launched from fixed wing and rotary wing Anti-Submarine Warfare (ASW) aircraft and ASW surface ships for the purpose of providing basic open ocean sonar training and torpedo placement exercises. Its operation consists of a dynamic run trajectory that is actively controlled in depth and course with pre-programmable run maneuvers emulating threat submarines and is detectable by all current U.S. ASW Platforms.

The MK-30 is an ASW training target for Navy surface ships, submarines, and aircrafts that are capable of simulating submarine threats anticipated in the twenty-first century littoral warfare environment.

The MK-30 Service Life Extension Program (SLEP) extends the useful service life of MK-30 ASW Targets to meet annual fleet training requirements.

[P5 / TG002 - MK39 MOD 3 EMATT]: Funding under this cost code provides for the procurement of MK-39 MOD 3 EMATT vehicles and Non-Recurring Engineering (NRE). NRE funds the cost of Pre-Proof of Manufacturing (POM) units and POM units, first article testing, tooling and test equipment, procurement of technical data package updates, start-up costs, and other one-time costs for production contractors.

[P5 / TG007 - MK30 SLEP]: MK 30 MOD 1 Service Life Extension Program (SLEP) extends the MK 30 MOD 1 ASW Target Service Life to continue the use of MK 30 ASW Target until FY27. The SLEP efforts required include the replacement of critical navigation subsystems, power distribution subsystems, mechanical parts including replacement hull sections, and test equipment that are no longer procurable and/or can no longer be maintained or that needs updates for cyber vulnerabilities.

[P5 / TG832 - MK39 MOD 2/3 EMATT PROD ENG (IN-HOUSE)]: Funding under this cost code provides for production engineering tasks performed by NUWC NPT and KPT including EMATT program management support, systems engineering, and production engineering.

[P5 / TG842 - MK39 MOD 2/3 EMATT QUALITY ASSURANCE]: Funding under this cost code provides for quality assurance efforts in support of the EMATT program.

*Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:
FY2020:

TG002(1.2.1) Non-Recurring: EMATT Non Recurring Effort (NRE) has a one-time increase of \$1.7M in FY20 to procure the Technical Data Package (TDP) for the MK39 Mod 3 EMATT to increase competition on future contracts. The Government controlled document for the program is the Performance Specification. The two prior 5 year production contracts Request For Proposal received one bid. Feedback from industry is that to allow other companies besides the incumbent to participate will require the government to supply a TDP to base the bid on. TDP funding is needed in FY20 to support an FY22 competition. Procurement of the TDP is a firm fixed price option on the current contract.

TG007(3.1.1) MK30 SLEP: Funding increase of \$1.2M for SLEP tasks are due to known sustainability issues and required redesign in the MK30 Mod 1. The SLEP tasks are to allow the MK30 MOD 1 to continue to operate until at least 2027. Targets in the inventory were manufactured in the 70's and 80's with some having over 40 years in service.

Footnotes:

(1) TG002: EMATT Non Recurring Effort (NRE) has a one-time increase of \$1.7M in FY20 to procure the Technical Data Package (TDP) for the MK39 Mod 3 EMATT to increase competition on future contracts. The Government controlled document for the program is the Performance Specification. The two prior 5 year production contracts Request For Proposal received one bid. Feedback from industry is that to allow other companies besides the incumbent to participate will require the government to supply a TDP to base their bid on. TDP funding is needed in FY20 to support an FY22 competition. Procurement of the TDP is a firm fixed price option on the current contract.

(2) TG007: Additional funding of \$1.2M/Year was added, starting in FY2020 for MK30 SLEP to address known sustainment and required redesign requirements that are needed to continue to operate the aging MK30 Mod 1.

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

FY 2020 funding totals include \$0.0M for Base and \$119.453M for Overseas Contingency Operations (OCO); of which \$119.453M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

This line item procures MK-54 Mod 0 Torpedo Kits, MK-54 Mod 1 Torpedo Kits, MK-54/Vertical Launch Anti-submarine Rocket (VLA) Conversion Kits, Torpedo Exercise Sections, VLA Components and Advanced Lightweight Torpedo (ALWT) hardware. It also funds the High Altitude ASW Weapon Capability (HAAWC). The MK-54 Mod 0 LWT maximizes the use of Non-Developmental Item (NDI) technologies, incorporating the proven technologies from existing torpedo programs with state of the art Commercial-Off-The-Shelf (COTS) processors and is a modular upgrade to LWT Inventory. MK-54 Mod 1 builds on the MK-54 Mod 0 improvements to expand the torpedoes capability in shallow water littoral environment and also improves the torpedoes counter-countermeasure capability to allow higher effectiveness in current and future threat environments. The MK-54 is an anti-submarine torpedo deployed from surface ships and ASW air platforms in littoral scenarios operating in shallow water acoustic and environmental conditions; effective in the presence of threat countermeasures and capable in deep water engagements. The ALWT builds on the MK 54 LWT and the MK 50 LWT, to provide improved torpedo effectiveness, through warhead, sensing, processing, propulsion and software upgrades.

The procurements for both the MK-54 MOD 0 Kits and MK-54 MOD 1 Low Rate Initial Production (LRIP) kits overlap in FY 2016-FY 2020. HAAWC LRIP WPN begins in FY 2019. ALWT LRIP WPN begins in FY 2022

[P5 / F5104 MK-54 MOD 0]: Funding under this cost code provides for the procurement of MK-54 MOD 0 hardware kits from the contractors (2), Engineering Change Proposals (ECPs) and Non-Recurring Engineering (NRE) to produce pre-Proof of Manufacturing (POM) units and POM units in the base year of a new contract, first article testing, product improvement, tooling and test equipment, procurement of technical data package updates and start-up costs for production contractors. The MK-54 MOD 0 Kits contract, includes Processor Group Assembly (PGA), Control Group Assembly (CGA), Inertial Measurements Unit (IMU), and afterbody components and cabling. The MK-54 MOD 0 Array Nose Assembly (ANA) kits contract, consists of array receivers and transmitters. Both contracts were competitively awarded. These items are assembled/installed with an MK-46 torpedo warhead and an upgraded MK-46 afterbody. Also included is government installation of the kits into All Up Rounds (AUR). Diminishing Manufacturing Sources (DMS) costs fund the procurement of obsolete commercial material to avoid the redesign and requalification of the electronics during the production cycle.

[P5 / F5110 MK-54 MOD 1 HARDWARE]: Funding under this cost code provides for procurement of MK-54 MOD 1 hardware kits from the contractors (2), Engineering Change Proposals (ECPs) and Non-Recurring Engineering (NRE) to produce Proof of Manufacturing (POM) units, first article testing, product improvement, tooling and test equipment, procurement of technical data package updates, and start-

Exhibit P-40, Budget Line Item Justification: PB 2020 Navy		Date: March 2019
Appropriation / Budget Activity / Budget Sub Activity: 1507N: Weapons Procurement, Navy / BA 03: Torpedoes and Related Equipment / BSA 2: Mod of Torpedoes and Related Equip		P-1 Line Item Number / Title: 3215 / MK-54 Torpedo Mods
ID Code (A=Service Ready, B=Not Service Ready): A	Program Elements for Code B Items: N/A	Other Related Program Elements: N/A
Line Item MDAP/MAIS Code: N/A		
<p>up costs for production contractors. The MK-54 Mod 0 Kits contract provides the afterbody upgrade components, Inertial Measurements Unit (IMU) and Control Group Assembly (CGA) for the MK54 MOD1 Kit. The MK54 MOD 1 Array contract provides the new 112 element array, receiver, transmitter, and Processor Group Assembly (PGA). Also included is government installation of the kits into All Up Rounds(AUR). Diminishing Manufacturing Sources (DMS) costs fund the procurement of obsolete commercial material to avoid redesign and requalification of the electronics during the production cycle.</p> <p>[P5 / F5105 FLEET EXERCISE SYSTEMS]: Funding under this cost code provides for procurement of MK-54 Fleet Exercise Sections (FES) utilized during in-water acceptance testing of MK-54 kits, fleet exercises and developmental and operational testing.</p> <p>[P5 / F5107 MK-54/ VLA KITS]: Funding under this cost code provides for procurement of MK-54 VLA upgrade kits, associated hardware, installation costs, and the associated engineering tasks, which supports the conversion and upgrade of existing MK-46 VLA's to make them compatible with the new MK-54 Mod 0 Torpedo. The MK-54 VLA upgrade kit is comprised of an upgraded Digital Auto-Pilot Control (DAC) unit, upgraded air stabilizer, upgraded Thrust Vector Controller (TVC), new MK-54 Torpedo Downloader System (TDS) payload cable, and new nose cap. The MK-54/VLA kit procures and installs modified VLA items for MK-54 compatibility. A MK-54/VLA kit consists of modifications to the digital autopilot and air stabilizer and new nose caps and cables. Funding in this cost code also pays for the upgrade of existing VLA canisters to be compatible with the MK-54 VLA torpedo downloader capability.</p> <p>[P5 / F5109 HAAWC]: Funding under this cost code provides for procurement, Engineering Change Proposals (ECPs) and non-recurring engineering of the MK-54 High Altitude ASW Weapon Capability (HAAWC) for the P-8 aircraft. HAAWC is an Air-Launched Accessory (ALA) that allows for employment of the MK-54 outside the current fixed wing air launch envelope. The nonrecurring cost sub-cost element is required for redesign due to obsolescence and qualification of new products or contractors and proof of manufacturing units for first article testing, as well as product improvement, value engineering, tooling, test equipment, procurement of technical data package updates, start-up costs, and other one-time costs in the first year of the production contract.</p> <p>[P5 / F5003 SUPPORT EQUIPMENT]: Funding under this cost code provides for procurement and maintenance of support and test equipment at Naval Undersea Warfare Centers (NUWC) Keyport and Newport, and the contractor facility for assembly, testing, and integration.</p> <p>[P5 / F5830 PRODUCTION ENGINEERING IN-HOUSE]: Funding under this cost code provides for production engineering tasks performed by NUWC Newport and Keyport and includes review of contractor generated ECPs, review and resolution of contractor failures and proposed corrective action, configuration management activities, contractor monitoring, risk analysis, technical problem resolution, software engineering, safety, integrated logistics support, environmental engineering, and information systems. Funding maintains production specification in accordance with production processes and provides subject matter experts to support root cause analysis of failed contractor hardware and monitor contractor defect resolution and reduction processes to ensure deficiencies are effectively addressed.</p> <p>[P5 / F5840 QUALITY ASSURANCE]: Funding under this cost code provides for quality assurance tasks performed by Naval Undersea Warfare Center (NUWC) Newport and Keyport including: conducting quality assurance reviews of the contractor and subcontractors, documentation indicating contractor conformity to product performance requirements, and review of objective quality evidence.</p> <p>[P5 / F5860 ACCEPT TEST & EVALUATION]: Funding under this cost code provides for government production acceptance test planning and conducting the production acceptance test program of contractor hardware, including in-water testing of the torpedoes on department ranges.</p> <p>[P5 / F5900 PRODUCTION ENGINEERING CONTRACTOR]: Funding under this cost code provides for contractor support to the program office.</p> <p>[P5 / F5103 FIELD SUPPORT OPERATIONS]: Funding previously allocated for field support tasks to upgrade MK-46 Torpedo VLA to MK-54 Mod 0 Torpedo VLA.</p>

Justification:

FY20 program funding changes:

- COST CODE F5104 ITEM 1.1.1 MK 54 Kits MOD 0: Unit cost increase is due to lower quantity procured and actual stair step pricing in the contract.
- COST CODE F5110 ITEM 1.1.2 MK-54 ENGINEERING SERVICES / ECPs FOR KITS: Increased funding \$500K over inflation to do a new subcontractor for array material and anticipated increased effort to support ECPs.
- COST CODE F5104 ITEM 1.1.3 MK 54 MOD 0 Kit Installation: The program will install procured kits delivered per the P-21 exhibit. Installation occurs one month after delivery and the installation is budgeted for in the year the installation is planned to occur. In FY 20, 364 Kits are planned for installation; an increase from the original 120 due to subcontractor bankruptcy and requalification efforts causing delivery delays from FY19 to FY20. Installation occurs one month after delivery and the installation is budgeted for in the year the installation is planned to occur.
- COST CODE F5110 ITEM 2.1.3 MK-54 ENGINEERING SERVICES / ECPS FOR KITS: Increased in FY 2020 due to the need to redesign the Torpedo electronics, which are obsolete. The redesign will include new Commercial Off the Shelf (COTS) processors, which increase the ability to continue software improvements to the weapon due to faster processors and improved communication protocols. The funding in FY20 will be used to complete design work and procure proof of design units to test the design and perform software integration. The redesign is necessary because electronic parts from the original design that started in FY06 are no longer available to make the Torpedo. Bridge buys of available electronic parts have been executed to support production for FY18-21. The redesign started in FY19 and continue through FY22 until a new design for the electronics is available and qualified. Production will stop in FY22 unless the redesign is funded, which will significantly impact the small business workforce producing the MK54 MOD 1 sonar section.
- COST CODE F5110 ITEM 2.1.4 MK 54 MOD 1 INSTALLATION: Funding provides for government installation of the MK54 Mod 1 kits and Afterbodies into All Up Rounds(AUR) as shown on the P-21. Installation occurs one month after delivery and the installation is budgeted for in the year the installation is planned to occur.
- COST CODE F5109 ITEM 7.1.1 HAAWC: Funding under this cost code provides for the procurement of MK54 High Altitude ASW Weapon Capability. Unit cost in FY20 reflects projected costs under new LRIP contract, which is higher than FY19 LRIP unit cost under the development contract, which was awarded and prices established in 2013 before actual production costs were understood.

(t) indicates the presence of a P-5a

Footnotes:

- (1) Funding increases from FY 2019 to FY 2020 due to unit cost increases. Unit cost increase is due to lower quantity procured and actual stair step pricing in the contract.
- (2) Funding increases from FY 2019 to FY 2020 due to a new subcontractor for array material and anticipated increased effort to support ECPs.
- (3) ITEM 1.1.3 - COST CODE F5104 MK 54 MOD 0 Kit Installation: The program will install procured kits delivered per the P-21 exhibit. Installation occurs one month after delivery and the installation is budgeted for in the year the installation is planned to occur. In FY 20, 364 Kits are planned for installation an increase from the original 120 due to subcontractor bankruptcy and requalification efforts causing delivery delays.
- (4) DMS material funds the procurement of obsolete commercial electronic material to avoid redesign of the MK54 MOD 1 torpedo. The MK54 MOD 1 Signal Processor and Data Processor are currently obsolete. The commercial manufacturer of these parts allows the MK54 Mod 1 program to make future purchases of these obsolete electronic component parts on the computer boards as they become obsolete. The increase in MK54 Mod 1 DMS funding from FY19 to FY20 is to support an increase in the amount of amount of electronic parts needed for end of life of type buys in FY20 to support the low rate initial production (LRIP) period and the first year of full rate production (FRP). This funding is to allow a stable baseline for software development and operational testing while allowing time to redesign the MK54 MOD 1 torpedo.
- (5) - COST CODE F5110 ITEM 2.1.3 MK-54 ENGINEERING SERVICES / ECPS FOR KITS: Increased in FY 2020 due to the need to redesign the Torpedo electronics which are obsolete. The redesign will include new Commercial Off the Shelf (COTS) processors which increase the ability to continue software improvements to the weapon due to faster processors and improved communication protocols. The funding in FY20 will be used to complete design work and procure proof of design units to test the design and perform software integration. The redesign is necessary because electronic parts from the original design that started in FY06 are no longer available to make the Torpedo. Bridge buys of available electronic parts have been executed to support production for FY18-21. The redesign started in FY19 and

ID Code (A=Service Ready, B=Not Service Ready) :		MDAP/MAIS Code:
<p>continue through FY22 until a new design for the electronics is available and qualified. Production will stop in FY22 unless the redesign is funded, which will significantly impact the small business workforce producing the MK54 MOD 1 sonar section.</p> <p>(6) ITEM 2.1.4 - COST CODE F5110 MK 54 MOD 1 INSTALLATION: Funding provides for government installation of the MK54 Mod 1 kits and Afterbodies into All Up Rounds(AUR) as shown on the P-21. Installation occurs one month after delivery and the installation is budgeted for in the year the installation is planned to occur.</p> <p>(7) COST CODE F5109 ITEM 7.1.1 HAAWC: Funding under this cost code provides for the procurement of MK54 High Altitude ASW Weapon Capability. Unit cost in FY20 reflects projected costs under new LRIP contract, which is higher than FY19 LRIP unit cost under the development contract, which was awarded and prices established in 2013 before actual production costs were understood.</p> <p>(8) COST CODE F5109 ITEM 7.1.4 HAAWC ALA Containers & Flight Test Simulator: Funding under this cost code provides for the procurement of HAAWC Air Launched Accessory Containers from the prime contract. Unit cost in FY20 reflects new projected costs under a new sole source LRIP/Production contract, which is higher than FY19 LRIP unit cost under the development contract. The development contract was awarded and ALA Container unit prices were established in 2013 before actual production costs were understood. The quantity of HAAWC ALA containers also increases from Quantity 117 in FY19 to Quantity 120 in FY20 which also contributes to this increase.</p>

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand).If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Footnotes:

⁽⁹⁾ 41 kits delivered in FY17 before production delay with nose arrays. Remaining 109 nose arrays will be delivered July 2018 - Mar 2019

Description:

FY 2020 funding totals include \$0.0M for Base and \$39.508M for Overseas Contingency Operations (OCO); of which \$39.508M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

This line item procures MK 48 Mod 7 Common Broadband Advanced Sonar System (CBASS) kits for Heavyweight Torpedo upgrades.

The CBASS torpedo kit consists of three major components: Guidance & Control Box (GCB), a Broadband Sonar Analog Receiver (BSAR), and preamplifier. The GCB continued from Mods in production since FY 2002 and procurement of the BSAR began in FY 2004. The BSAR is a CBASS specific item, which consists of a preamplifier, receiver, and interfacing hardware that provides the capability to transmit and receive over a wide frequency band; taking advantage of broadband signal processing techniques. This provides for improvements in advanced threat countermeasures (CMs) capabilities.

[P5 / D1001 Hardware]: Funding under this cost code provides for the procurement of CBASS hardware kits from the contractor, Engineering Change Proposals (ECP), and Non-Recurring Engineering (NRE) to resolve production issues, including obsolescence. Engineering Services and Engineering Change Proposals (ECPs) pay for studies, plans, design changes, and implementation of design changes by the contractor; primarily due to obsolescence that occurs during the contract performance. Also included in this cost code is the cost of government installation of kits procured in prior years. The installation includes required upgrades to convert the MK 48 Mod 6 Torpedo into a MK 48 Mod 7 Torpedo. The pre-amp, guidance control box, EMI filter, and Broadband Sonar Analog Receiver (BSAR) are installed at the government Intermediate Maintenance Activity. The torpedo goes through a final integration test, is loaded with the operational software, and completes quality assurance checkout prior to issuing it as a warshot or exercise torpedo. Diminishing Manufacturing Sources (DMS) funds are provided to procure electronic parts, which are declared obsolete by the original equipment manufacturing. This is done to avoid the cost of an expensive redesign in the CBASS kit during execution of the production contract. The contractor will be required to procure, deliver, and store the MK 48 Mod 7 DMS material for these obsolete components. Non-Recurring Engineering (NRE) funds the procurement of Proof of Manufacturing (POM) units for government testing, first article testing, tooling and test equipment, procurement of technical data package updates, and start-up costs for the production contract.

[P5 / D1002 - MK48 TI-1 Hardware]: Program under this cost code provides for the procurement of Low Rate Initial Procurement (LRIP) for TI-1 Guidance & Control Section upgrade, which will supply a new Guidance and Control (G&C) including new Sonar Assembly (higher density array, transmitter, receiver), Guidance and Control Box (GCB), Tuning Box, and an Ethernet device switch. In addition to the G&C section, the TI-1 upgrade will also feature a new Warhead Electronics System (WES) to support improved fuzing and the Improved Post Launch Communications System (IPLCS), which will potentially replace the existing copper guidance wire with fiber optics. Improvements are needed in the presence of countermeasures, shallow water, low Doppler targets, fusing, Very Shallow Water (VSW), and Anti Surface

Justification:

FY20 Program Changes:

1.1.4 CBASS Installation: Funding in FY20 increased due to increase in number of government installations of CBASS kits. The program will install procured kits delivered per the P-21 exhibit. In FY20 110 kits are scheduled to be installed.

Footnotes:

⁽³⁾ New competitive contract award in FY 2016. Longer lead time to delivery of Proof of Manufacturing (POM) units.

⁽⁴⁾ MSR lowest step-ladder Qty is 10; EOQ has not yet been determined by the contractor.

⁽⁵⁾ MSR lowest step-ladder Qty is 10; EOQ has not yet been determined by the contractor.

⁽⁶⁾ MSR lowest step-ladder Qty is 10; EOQ has not yet been determined by the contractor.

⁽⁷⁾ MSR lowest step-ladder Qty is 10; EOQ has not yet been determined by the contractor.

⁽⁸⁾ Unit cost is based on the contract costs. Unit cost is determined by quantity planned for order. All the production contracts have stair step pricing, so as quantity increases and crosses a stair step, the price steps down. In FY20 the unit cost for 54 is in a lower cost step ladder than what we are predicting in FY21 and FY22. FY21 is also the first year of a new competitive contract award which is why we have NRE and a lower quantity. FY22 is the last year we need to procure MOD 7 CBASS before we transition to what will be the MOD 8. Another factor added to the unit cost is Production Support Material (PSM). That cost gets prorated into the unit cost, so that why in FY21 and FY22 even though they are in the same stepladder, the cost is more in FY21 because there are less units to prorate the PSM over.

⁽⁹⁾ MSR lowest step-ladder Qty is 10; EOQ has not yet been determined by the contractor.

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Footnotes:

- ⁽⁴⁾ MSR lowest step-ladder Qty is 10; EOQ has not yet been determined by the contractor.
- ⁽⁵⁾ MSR lowest step-ladder Qty is 10; EOQ has not yet been determined by the contractor.
- ⁽⁶⁾ MSR lowest step-ladder Qty is 10; EOQ has not yet been determined by the contractor.
- ⁽⁷⁾ MSR lowest step-ladder Qty is 10; EOQ has not yet been determined by the contractor.
- ⁽⁹⁾ MSR lowest step-ladder Qty is 10; EOQ has not yet been determined by the contractor.

Description:

FY 2020 funding totals include \$0.0M for Base and \$5.183M for Overseas Contingency Operations (OCO); of which \$5.183M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

The Quickstrike Mine program provides Naval mines for use as anti-ship or anti-submarine subsurface weapons. The Naval mining capability consists of the QUICKSTRIKE (QS) mine, the Submarine Launched Mobile Mine (SLMM), and the modified Clandestine Delivered Mine (CDM).

The Quickstrike is a family of shallow water, aircraft laid mines used primarily against surface and subsurface craft. The QUICKSTRIKE family of delivered mines has 3 variants based on size - the MK 62, MK 63, and MK 65. The MK 62 and MK 63 (500 lb. and 1000 lb.) QS are created by adding mine hardware to the MK 82 and MK 83 general purpose bomb (respectively) to form a mine. The MK 65 (2000 lb.) QS consists entirely of hardware designed for use as a mine. The Mod 0, 1, and 3 variants utilize various Target Detection Devices (TDD). The QS Mod 3 utilizes a newly developed TDD MK 71, a software-programmable device capable of being programmed to optimize detection of new threats. For the QUICKSTRIKE MK 62 and 63, the QS Mod 3 Kit consists of the TDD (including the service and dummy MK 71), Safe/Arming (S&A) devices (including the service MK 75, practice MK 81, and dummy MK 84), battery (MK 176), TDD Adapter Ring MK 163, and miscellaneous hardware. For the QUICKSTRIKE MK 65, the Mod 3 Kit consists of the TDD (including the service and dummy MK 71), the existing S&A devices (including the service MK 45 and practice and dummy S&A devices), the existing batteries MK 131 or 132, TDD Adapter MK 157, and miscellaneous hardware. Additional support hardware for the QS MK 62/63/65 Mod 3 includes Test Set MK 650 and Programmer MK 11. The MK 67 SLMM is the only submarine launched variant. The CDM uses existing SLMM components to provide a mine with potential to be delivered by unmanned maritime platforms.

Starting in FY 2024, procurement of primary hardware and support equipment for encapsulating effectors commences for the Hammerhead program. Primary hardware includes canisters and anchors for each mine as well as onboard sensing and processing. The Hammerhead program uses a weapon which is self-contained and is released when a target is detected, using mobility to engage the target. The system uses modern sensing and processing technology to enable accurate targeting at increased range. It will provide maritime mining capability in deeper water depths compared to existing bottom mines, and enable a wide area of coverage per each weapon.

Gross/Weapon System Unit Cost (<i>\$ in Dollars</i>)	-	-	-	-	-	-	-	-	-	-	-	-

Description:

FY 2020 funding totals include \$0.0M for Base and \$79.028M for Overseas Contingency Operations (OCO); of which \$79.028M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

The Torpedo Support Equipment account procures various 4T and associated torpedo components required to ready weapons for Surface Ships, Submarines, Fixed Wing, and Rotary Wing to achieve and maintain a readiness posture sufficient to provide Anti-Submarine Warfare (ASW) and Anti-Surface Warfare (ASUW) readiness. The objective of this line is to provide the fleet with exercise weapons for conducting training maneuvers, which involves firing the torpedoes and maintaining warshot inventories in an operational ready-for-issue (RFI) status in support of combat ready deployment by ASW forces. After a torpedo is fired during a training exercise, it is recovered and all expendable components such as batteries, cables, and igniters (as well as various accessories required for air-launched torpedoes) must be replaced. These items, as well as components such as exercise heads, fuel tanks, and exhaust valves may be used more than one time, but they are worn out or lost in service and are procured each fiscal year in quantities dependent upon the fleet training requirements and tempo of operations. The torpedoes requiring support are the MK-46 Mod 5A(SW); MK-48 Mods 6 (legacy and ACOT) and 7; and MK-54.

[P5 / F8001 - LWT SUPPORT EQUIPMENT]: LIGHTWEIGHT (LWT) Support Equipment procures 4T components to support: (1) Exercise torpedo builds for Fleet Proficiency Surface Command Course and Tactical Development firings; (2) Warshot torpedo maintenance to sustain the fleet with an inventory of RFI warshot torpedoes as they come due for maintenance; (3) Assembly of new production MK-54 Warshots (4) Vertical Launch Anti-Submarine Rocket (ASROC) (VLA) Warshot and Exercise missile assemblies; and (5) Various air launch frame assemblies to support Fleet loadout. LWT 4T Components include the following: seawater batteries, pressure cylinders, thermal batteries, fuel shutoff valves, gas generator assemblies, igniters, containers, lanyard start assemblies, electrical initiators, suspension bands, VLA assembly kits, and propeller baffles.

[P5 / F8002 LIGHTWEIGHT OTHER EQUIPMENT INVESTMENT]: Procures, installs, and supports Engineering Change Proposal/Ordnance Alteration (ECP/ORDALT) material required for support and test equipment and to retrofit torpedoes and 4T components to the latest RFI configuration.

[P5 / F8830 LIGHTWEIGHT PRODUCTION ENGINEERING - IN HOUSE]: Provides for production support services at Naval Undersea Warfare Center (NUWC) Divisions Keyport/Newport (KPT/NPT) including program planning, funds management, budgeting, data management, acquisition engineering, software management, Integrated Logistics Support (ILS) and Government-Furnished Equipment (GFE) management, training equipment and configuration management.

Line Item MDAP/MAIS Code: N/A		
<p>[P5 / F8840 - LIGHTWEIGHT QUALITY ASSURANCE]: Provides material costs associated with failure analysis and site investigations for torpedo system component failures, product quality assurance (QA), and critical unique firing tests.</p> <p>[P5 / F8860 - LIGHTWEIGHT ACCEPTANCE TEST AND EVALUATION]: Provides support for acceptance testing of LWT 4T components.</p> <p>[P5 / F8900 - LIGHTWEIGHT PRODUCTION ENGINEERING - CONTRACTOR]: Provides for production support services including program planning, funds management, budgeting, and data management.</p> <p>[P5 - 2 / F8003 LIGHTWEIGHT RECOVERABLE EXERCISE TORPEDO (REXTORP)]: Provides for the procurement of MK-54 REXTORPs. REXTORPs provide a reusable exercise inert torpedo shape for fixed wing, rotary, and surface launched platforms in support of Fleet ASW training and readiness.</p> <p>[P5 - 3 / F8100 - HEAVYWEIGHT EXERCISE AND EXPENDABLES AND COMPONENT REPLACEMENT]: Procures 4T components to support: (1) exercise torpedo builds for fleet proficiency in the submarine and surface command course and tactical development firings; (2) warshot torpedo maintenance to sustain the fleet with an inventory of RFI warshot torpedoes as they come due for maintenance; and (3) assembly of modernized MK-48 Mod 7 components back to an All-Up-Round (AUR) configuration, either exercise or warshot. HWT 4T components include the following: wire coils, flex hoses, Otto Fuel, igniters, propellant, A-cables, A-cable inserts, A-cable receptacles, cylinder barrels, exercise fuel tanks, containers, and chamber and valves.</p> <p>[P5 - 3 / F8101 - HEAVYWEIGHT OTHER EQUIPMENT INVESTMENT]: Procure modernized Automatic Test Equipment (ATE) to perform full-up automatic comprehensive system testing of all Torpedo MK 48 variants in an All-Up-Round (AUR) torpedo configuration. Support numerous additional testing evolutions, including factory acceptance testing, proofing, periodic maintenance, group testing, and weapon turnaround/conversion activities.</p> <p>[P5 - 3 / F8843 - HEAVYWEIGHT QUALITY ASSURANCE]: Provides material costs associated with failure analysis and site investigations for torpedo system component failures and product QA and critical unique firing tests.</p> <p>[P5 - 3 / F8833 - HEAVYWEIGHT PRODUCTION ENGINEERING - IN HOUSE]: Provides for production support services at NUWC Divisions KPT/NPT including program planning, funds management, budgeting, data management, acquisition engineering, software management, ILS, and GFE management, training equipment, and configuration management.</p> <p>[P5 - 3 / F8863 - HEAVY WEIGHT ACCEPTANCE TEST AND EVALUATION]: Provides support for acceptance testing of HWT 4T components.</p> <p>[P5 - 3 / F8893 - HEAVYWEIGHT PRODUCTION ENGINEERING - CONTRACTOR]: Provides for production support services including program planning, funds management, budgeting, and data management.</p>

Justification:
FY 2020 Program Changes:

F8002 (2.1.1) Lightweight Other Equipment Investment: decrease from FY19 to FY20 is due to a one-time funding in FY19 of \$2.6M for 32 MK 54 FES's.

F8100: \$3.2M increase to procure 4T material required to assemble the additional Exercise and New Production AUR Warshot torpedoes being assembled starting in FY20. This line buys the material required to assemble the components procured in WPN 3117 and maintenance turns funded in OMN 1D4D.

Remarks:

[Hardware] 4T material is consumed by the Fleet and IMAs each year, and must be replaced to maintain required inventory levels (2 year stock level). If funds are marked due to contract award delays, the next years funding is not adequate to replenish material consumed in the year prior, resulting in reduced inventory putting future torpedo builds at risk. All production deliveries, Fleet training, and Warshot maintenance builds depend on 4T material being readily available.

(†) indicates the presence of a P-5a

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Gross/Weapon System Cost	-	-	371.615	-	-	41.669	-	-	44.166	-	-	0.000	-	-	47.140	-	-	47.140

Remarks:

[Hardware] 4T material is consumed by the Fleet and IMAs each year, and must be replaced to maintain required inventory levels (2 year stock level). If funds are marked due to contract award delays, the next years funding is not adequate to replenish material consumed in the year prior, resulting in reduced inventory putting future torpedo builds at risk. All production deliveries, Fleet training, and Warshot maintenance builds depend on 4T material being readily available.

F8100: \$3.2M increase in FY20 to procure 4T material required to assemble the additional Exercise and New Production AUR Warshot torpedoes being assembled starting in FY20. This line buys the material required to assemble the components procured in WPN 3117 and maintenance turns funded in OMN 1D4D.

(†) indicates the presence of a P-5a

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

FY 2020 funding totals include \$0.0M for Base and \$3.89M for Overseas Contingency Operations (OCO); of which \$3.89M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

The Anti-Submarine Warfare (ASW) Range program provides test and training tracking equipment for both Contiguous United States (CONUS) and Outside Contiguous United States (OCONUS). This equipment is used for ground truth tracking of participants during Fleet training exercises and torpedo firings and directly supports reconstruction and analysis for Undersea Warfare (USW) proficiency assessment and test, evaluation & analysis. The infrastructure supported includes: Southern California Offshore Range (SCORE), Barking Sands Tactical Underwater Range/Barking Sands Underwater Range Extension (BARSTUR/BSURE), Pacific Northwest Range Complex (Dabob and Nanoose), Atlantic Undersea Test and Evaluation Center (AUTEC), Portable Offshore Training Range (POTR), Portable Undersea Training Range (PUTR) and other portable capabilities abroad in support of Forward Deployed Naval Forces (FDFN) training requirements.

[P5 / F4001 - UTRE/PINGER EXERCISE EQUIPMENT]: Underwater tracking equipment is placed in weapons and other underwater vehicles for tracking during training and Test and Evaluation (T&E) exercises, and to ensure safe operation and movement of all craft and weapons on fixed and portable ranges for the Underwater Tracking Range Equipment (UTRE)/Pinger program. Funding is used to procure equipment for T&E exercises in addition to improvement and modernization projects.

[P5 / F4006 - STATIONARY TARGET EQUIPMENT MK28]: The stationary target equipment includes the MK 28 Targets and all equipment used for conducting Service Weapons Tests (SWT) on in-service and advanced war-shot torpedoes. The SWT is the only test the Navy has to verify the explosive train of lightweight and heavyweight torpedoes. Funding is used to procure target systems and equipment for SWT in addition to improvement and modernization projects.

[P5 / F4830 - PRODUCTION ENGINEERING - UTRE]: Funds for production engineering efforts performed by a field activity or contractor during the production phase of these projects.

[P5 / F4850 - PRODUCT IMPROVEMENT - UTRE]: Product improvement for fixed and portable range and fleet equipment.

Description:

FY 2020 funding totals include \$0.0M for Base and \$3.803M for Overseas Contingency Operations (OCO); of which \$3.803M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

First Destination Transportation (FDT). FDT delivers material from a procurement source to the first point of use or storage which may be in the Continental United States or overseas. The procurement source may be a supplier outside of the Department of Defense (DoD) supply system or a DoD activity which fabricates new material. FDT also includes transportation from point of origin to point of use or storage when Navy-owned material or equipment is provided to a contractor incident to a Research and Development project or a system/equipment acquisition or modification.

Description:

FY 2020 funding totals include \$0.0M for Base and \$14.797M for Overseas Contingency Operations (OCO); of which \$14.797M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

This line item procures the initial issue of weapons, modernization, standardization and stock replenishment of a wide variety of Small Arms and weapons (caliber .50 and below) to meet Small Arms allowances and inventory objectives, including required gun mounts and associated support components.

This line also provides sufficient types and quantities of weapons to support training, afloat security forces and shore missions of approximately 1,300 ship/ashore activities Navy-wide including the Naval Mobile Construction Battalions, Naval Construction Force Support Units, Construction Battalion Maintenance Units, Mobile Security Force, Marine Corps Security Force Battalion and Master at Arms. Quantities of weapons procured with the above funding are to meet Small Arms allowances and inventory objectives.

This line item also procures a range of weapons and small arms considered service common equipment for Naval Special Warfare (NSW) such as assault and sniper rifles, handguns, machine guns, mortar firing systems, and a variety of components including gun sights, gun mounts, combat and thermal optics and other related equipment. This funding supports the inventory objectives and service-common Small Arms allowances for NSW.

Justification:

Funding in FY 2020 supports meeting Navy inventory objectives, including the XM17 Modular Handgun System (MHS) service pistol and the 5.56 carbine. Funding also supports Naval Special Warfare efforts supporting the NSW service common inventory allowance and includes the phased replacement of M16 rifles to the M4A1N 5.56mm carbine, the replacement of the MK14 series 7.62x51MM enhanced battle rifle (EBR) with the Compact Semi-automatic Sniper System (CSASS), and M224 60MM Mortars. Funding supports procuring 213 M3E1, 56 MK 48, 935 M4A1 5.56MM Carbine, 10,000 MHS, XM17, 41 60MM Mortars (M224) associated transportation, and production engineering for Expeditionary Warfare. Funding supports procuring 2,500 M4A1 5.56MM Carbine, 10,000 MHS, XM17, 100 M2A1, and 400 MK 87-M4 UPPER and production engineering for Surface Warfare.

Description:

FY 2020 funding totals include \$0.0M for Base and \$44.126M for Overseas Contingency Operations (OCO); of which \$44.126M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

Phalanx Close-In Weapon System (CIWS) is an autonomous combat system that searches, detects, tracks (radar and electro-optic), and engages threats with a 20mm Gatling gun capable of firing 4,500 tungsten penetrator rounds per minute. Integral to ship self-defense and the anti-air warfare "defense-in-depth" concept, CIWS provides terminal defense against anti-ship missiles and high-speed aircraft penetrating other fleet defenses. Phalanx CIWS can operate autonomously or be integrated with a ship's combat system.

The Block 1B configuration provides further defense against asymmetric threats such as small, fast surface craft, low slow-flying fixed and rotary-winged aircraft, and unmanned aerial vehicles through the addition of an integrated Forward-Looking Infra-Red (FLIR) sensor. Block 1B also incorporates an Optimized Gun Barrel (OGB) for tighter ordnance dispersion. Enhanced Lethality Cartridges (ELC) can be used with the OGB for improved target penetration.

The CIWS SeaRAM is a CIWS Phalanx Block 1B with the 20mm Gatling gun removed and replaced by an eleven round guide that utilizes the Rolling Airframe Missile (RAM) Block 1A or Block 2 missiles for extended Anti-Ship Missile coverage. The resulting system is designated MK 15 Mod 31/32 CIWS SeaRAM and shares a minimum of 85% hardware and software commonality of the CIWS Phalanx system. CIWS SeaRAM is installed on LCS Independence class and 8 ROTA based DDGs.

[DT6IN/DT8IN] Installation funding includes all planning and execution requirements for ship installations. Planning efforts include Design Service Allocation (DSA) efforts associated with the planning yard ship checks, Ship Installation Drawing (SID) development, installation on-site support and Ship Selected Record (SSR) updates. Execution efforts include shipyard planning, shipyard support services, installation material procurement, and Alteration Installation Team (AIT) efforts. Installations include the Rota DDG SeaRAM installs on DDGs 51,64,71,75,78,79,80 and 84; and the installation efforts also support for the Navy Type Navy Owned (NTNO) Coast Guard WMSLs.

[P5 / DT001 CIWS BLOCK 1B]: As part of the Block 1B Reliability, Maintainability and Availability (RM&A) Roadmap effort, this line is an upgrade/conversion to CIWS incorporating a stabilized thermal imager and an automatic acquisition video tracker that provides the additional capability to engage small, high speed, maneuvering surface craft and low, slow aircraft and helicopters. The thermal imager also improves performance against Anti-Ship Cruise Missiles by providing more accurate angle tracking information to the fire control computer. CIWS Block 1B is scheduled to be installed on the following ship classes: CGs,

*Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:

There are 231 U.S. shipboard systems, 4 trainers, 3 Engineering Development Module (EDM)/Periodic Conformance Inspection (PCI) mounts procured in the Program of Record and 8 on DDGs at ROTA. This budget also provides for the procurement and installation of 4 Coast Guard Maritime Security Cutter Large (WMSLs) and 2 systems for CG 68.

This budget provides for the procurement of CIWS Reliability, Maintainability and Availability (RM&A) roadmap that will provide system improvements and allow time between Class "A" overhauls to be extended while still maintaining an acceptable operational availability (Ao). The RM&A Kit #1 improvements include the following: coolant pump with improved impeller, long-life gyros, Transmitter Mode Control Unit (TMCU) improvement, Built-in-Test Equipment (BITE) Control Circuit Card Assembly (CCA), Waveguide Air Dryer System (WADS) piston compressor, WADS water separator, Gun and Ammunition Handling System (GAHS) chuting, gun cradle cable assembly, main cable reliability improvements, and resolver improvements. The RM&A Kit #2 improvements primarily include Higher Reliability Phalanx Thermal Imager (HRPTI). These RM&A improvements will be installed during overhauls or by standalone shipboard Alteration Installation Teams (AIT).

FY 2019 - FY 2022 increase for CRDC (CIWS RAM Defense Capability) to improve sensor capability. The CRDC is fielded aboard CVN class ships. This line provides for Hardware procurement, installation hardware and labor for AIT, ISEA, contractor support and initial ILS support.

FY2020 - FY2024 cancellation of RM&A procurement for Tech Refresh was greater than the procurement of the tech refreshed material. With the removal of funds being greater, this also impacts the CG 68 installation effort in FY22.

Footnotes:

- (1) Software BL 2.17 completed and being fielded for the enhancement of counter UVA capability.
- (2) Block 1B RM&A procurements cancelled for the Tech Refresh effort.
- (3) Production Engineering efforts associated with RM&A procurements cancelled.
- (4) FY 2019-FY 2022 increase for CRDC (CIWS RAM Defense Capability) to improve sensor capability. The CRDC is fielded aboard CVN class ships. This line provides for Hardware procurement, installation hardware and labor for AIT, ISEA, contractor support and initial ILS support. The FY 2019 funding supports 7 shipsets and installation on 6 CVNs. FY 2020 funding supports the procurement of 3 sensors, 3 enclosures, and spares for ultimate employment aboard CVN 77. It supports the installation and checkout for CVN 70 and CVN 76. Also supports the long lead AIT funding for installation materials for CVN 72.
- (5) [2-4-6 Plan CG Modernization] USS ANZIO (CG 68) is the remaining non-Block 1B configured ship. CG 68 was originally in our WPN Program of Record for upgrade to Block 1B, but was placed on the decommissioning list; therefore, removed from the WPN POR budget. The Cruiser Modernization 2-4-6 program subsequently removed CG 68 from the decommissioning list. The \$10.9M procures two (2) Block 1B mounts that will be installed on CG 68 during Cruiser Modernization in FY22.

Description:

The CIWS Block 1B Baseline 2 Radar Upgrade (RUG) Kit is required for CGs, CVNs, DDGs, LCCs, LHAs, LHDs, LPDs, LSDs and WMSLs platforms. The CIWS Block 1B Baseline 2 RUG kit is new state of the art digital radar that provides improved performance and increased reliability. It mitigates 200 obsolete components inherent in the existing analog radar by introducing advanced COTS-based signal processing coupled with new low noise signal source. It provides a 2x sensitivity increase along with expanded Doppler (velocity) coverage required for detection and tracking of advanced ASCM and asymmetric threats, provides a 10% increase in system level reliability and provides a 15% reduction in sailor man-hours required for CIWS planned system maintenance.

FY 2016 was the last year of procurement for Radar Upgrade (RUG) Kits.

Description:

The Block 1B surface mount includes the addition of a thermal imager, an automatic acquisition video tracker, and stabilization system for the tracker. The upgrade is essential to provide the Fleet capability against small high speed surface threats and low speed air threats.

[CIWS Block 1B] Installation schedule reflects the installation and the CIWS Block 1B and the modification kits CIWS Block 1B conversion upgrade. These 2 cost elements are incorporated into the mount at the factory and the complete mount is installed. It also includes four (4) SeaRAM installation for Rota-based DDGs (in FY19 & FY21) procured under separate budget line items. The budget also provides for the Design Service Allocation (DSA) efforts associated with the planning yard ship checks, Ship Installation Drawing (SID) development, installation on-site support and Ship Selected Record (SSR) updates.

Description:

FY 2020 funding totals include \$0.0M for Base and \$44.98M for Overseas Contingency Operations (OCO); of which \$44.98M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

The Coast Guard Weapons line funds the Coast Guard combat system suite for the United States Coast Guard (USCG) cutters under the Coast Guard surface asset acquisition program. Under inter-service agreement (delineated in OPNAVINST 4000.79B), DON plans, programs, and budgets for specific Navy military equipment, systems and logistic support requirements for USCG units to ensure the USCG is prepared to execute naval warfare tasks in consonance with United States Navy (USN) units. Ship construction and installation costs are funded under the Department of Homeland Security appropriation.

The combat systems and weapons suite will be aligned with future naval ship building programs to support commonality among the two service's systems and meet national fleet objectives. The combat system suite must complement and integrate with Navy combat systems. The suite is an appropriate balance of equipment to ensure the USCG is prepared to accomplish the assigned naval warfare tasks in concert with USN units. The surface asset acquisition program combat suites include the following:

[P5 / CG002 MK 110 GUN]: Provides the MK 110 gun to engage surface threats, independently or in cooperation with other forces, achieving mission kill on high-speed coastal patrol craft beyond small and intermediate caliber gunfire effective range. Includes gun mount, equipment procurement, recurring engineering, and ILS support for the United States Coast Guard National Security Cutter (NSC), aka the Maritime Security Cutter, Large (WMSL), and the Offshore Patrol Cutter (OPC), aka the Maritime Security Cutter, Medium (WMSM), in accordance with OPNAVINST 4000.79(Series) and the Naval Operational Capabilities (NOC) document.

[P5 / CG003 MK 160 GCS]: Provides the MK 160 Mod 12 Gun Computer System (GCS) including equipment procurement, production support, systems engineering, data, and software and test support for the National Security Cutter (NSC), aka the Maritime Security Cutter, Large (WMSL), and the Offshore Patrol Cutter (OPC), aka the Maritime Security Cutter, Medium (WMSM). The MK 160 GCS is required to plan and direct surface threat engagements including the capability to fire warning shots, disabling fire and achieve mission kill against these threats in accordance with National Fleet Policy, OPNAVINST 4000.79(Series), and the NOC.

[P5 / CG004 MK 38 MACHINE GUN SYSTEMS]: Provides the MK 38 Mod 2/3 Machine Gun System (MGS) to plan and engage surface threats, achieving missions kill on high speed patrol craft beyond minor caliber gunfire effective range in accordance with OPNAVINST 4000.79(Series) and the NOC. The MK 38 Mod 3 (vice Mod 2), which began production in FY 2015, permits greater effective range, greater

Justification:

FY 2020 funding supports the procurement of Navy Type/Navy Owned (NT/NO) weapon systems, integrated logistics support (ILS), technical documentation, software, test and production support for USCG National Security Cutters (WMSLs), Fast Response Cutters (FRCs), and Offshore Patrol Cutters (OPC) being constructed under the Coast Guard Surface Asset Acquisition Program. Funding increases from FY 2019 to FY 2020 are attributed to the (a) full funding of mandatory safety analyses and software updates required for the MK48 Gun Weapons System authorize cutters to fire and deploy with the MK110 57MM GUN (ILS Support), including the retrofitting of software updates and safety testing for previously installed system; (b) An additional two (Qty 2) MK 38 Machine Gun Systems. One is for the OPC program, which increases procurement from 1 to 2 hulls per year, with a corresponding increase in weapons and equipment (including the MK 38 MGS). The second, additional MK38 MGS is for the WMEC as part of WMEC 270' Modernization. Integrated Logistics Support, including support for testing and installation, increase in proportion with these additional procurements; (c) An increase to Combat System Integrated (CSI) costs that correspond to the Spring 2018 finalization of requirements and cost estimates associated with the integration of NT/NO weapons systems with the OPC combat system.

FY 2020 funds the following Coast Guard Weapon items for USCG cutters: procure MK 110 guns and associated ILS; procure MK 160 Gun Computer System and associated support; provide MK 160 test support; procure the MK38 Machine Gun System, associated spares/equipment, MK38 Upgrade to attached a 7.62 MM MK52 Mod 0 Coaxial Gun, and ILS support; provide combat system integration support; procure and integrate the ATHENA Control, Correlation & Display (CCD) System on OPCs, which provides target queuing for Gun Weapon System engagements. The MK 110 is the primary weapon system of the OPC and NSC, and the MK 38 is the primary weapon systems of the FRC and WMEC, and are critical to their self-defense capabilities.

FY 2020 through FY 2023 reflects a change in requirement for the WMEC 270' Modification to procure one MK38 per WMEC hull instead of one MK110 57MM Gun per hull. MK110 57 MM Gun integrated logistics support (ILS) Support is reduced in proportion to the reduction in procurement. ILS Support is added in FY 2020 and continuing through the end of the FYDP to support the MK38 for WMEC.

To support the construction schedule of the Department of Homeland Security addition of National Security Cutter (NSC) #10, \$9.0 million in additional funding was appropriated in the FY 2018 Budget to procure an addition MK110 57 MM gun in FY 2018.

ID Code (A=Service Ready, B=Not Service Ready) :		MDAP/MAIS Code:
<p>(†) indicates the presence of a P-5a</p> <p>Footnotes:</p> <p>(1) \$9 Million in additional funding appropriated by Congress in FY 2018 to fund a second 57 MM Gun procurement and associated ILS Support for the Congressional addition of NSC 10 to the FY 2018 budget. Reductions of one 57MM Gun per year in FY 2020 through FY 2023 are due to removal of the requirement to outfit WMEC with the 57MM GUN during the 270 Modernization project. The WMEC 270 Modernization requirement has been updated to procure a MK38 Gun on each hull in place of the 57MM Gun.</p> <p>(2) FY 2019 to FY2020 increase of \$1.053M is for mandatory safety analyses and software updates required for the MK48 Gun Weapons System to authorize cutters to fire and deploy with the MK110 57MM GUN (ILS Support), including the retrofitting of software updates and safety testing for previously installed system.</p> <p>(3) Funding increases from FY 2019 to FY 2020 because program support costs were controlled in previous fiscal years by phasing in integrated logistical support (ILS) for a growing program over time. The MK38 Machine Gun System program has been funding a limited amount of ILS for the Offshore Patrol Cutter (OPC) program in preparation for first delivery. The first OPC delivery is scheduled for late FY19, and requires the remaining planned integrated logistics support to come online shortly after in early FY20, increasing ILS Support from FY19 to FY20.</p> <p>(4) The WMEC 270 Modernization requirement has been updated to procure a MK38 Gun on each hull in place of the 57MM Gun starting in FY 2020.</p> <p>(5) The MK38 will be upgraded with an attached MK 52 Mod 0 Coaxial Automatic Gun. The MK38 Coaxial Gun upgrade will be back-fit on OPC 1 and 2 in FY 2019.</p> <p>(6) FY20 increase attributed to the first Offshore Patrol Cutter (OPC) delivery scheduled for late FY19. Requiring the remaining planned integrated logistics support to come online shortly after in early FY20. In FY21 and out, cost growth is forecasted to be only marginal, approximating inflation.</p> <p>(7) ILS Support for the WMEC 270 Modernization is added to support the updated requirement to procure a MK38 Gun on each WMEC hull in replacement of the 57MM Gun requirement.</p> <p>(8) FY 2019 to FY 2020 increase attributed to updated integration effort requirements for the OPC ATHENA Control, Correlation & Display (CCD) System which provides target queuing for Gun Weapon System engagements. These requirements were established during Spring 2018 when final cost estimates were received.</p>

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

FY 2020 funding totals include \$0.0M for Base and \$66.376M for Overseas Contingency Operations (OCO); of which \$66.376M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

Gun Mount Mods supports various types of Gun Weapon Systems, sub-system modifications and upgrade requirements.

[P5 / E5001 MK45 MODS 1&2]: Funding was realigned to E5011.

[P5 / E5002 MEDIUM CALIBER GUN MODS]: Medium Caliber Gun Mounts (MK110 57mm or MK75 76mm) are installed on Littoral Combat Ships (LCS), United States Coast Guard (USCG) Maritime Security Cutters, Large (WMSL), and USCG Medium Endurance Cutters (WMEC) as well as land based training/test units. The gun mounts provide an anti-surface warfare and anti-air warfare capability for outfitted ships. Funds procure Ordnance Alterations (ORDALT kits), and provide Integrated Logistics Support (ILS) and production engineering for system improvements that affect safety, reliability and maintainability.

[P5 / E5004 MK45 MOD 4]: Funding was realigned to E5011.

[P5 / E5006 MINOR CALIBER GUN MODS]: Minor Caliber Gun Mounts (MK38 MOD or MK46 MOD) are installed on Amphibious Assault Ships (AS), Aircraft Carrier (nuclear propulsion) (CVN), Guided Missile Cruisers (CG), Destroyer Designated Guided ships (DDG), Littoral Combat Ships (LCS), Landing Ship Dock amphibious assault ships (LSD), Landing Helicopter Assault ships (LHA), Landing Helicopter Dock amphibious assault ships (LHD), Patrol Crafts Coastal (PC), United States Coast Guard (USCG) Fast Response Cutters (FRC), USCG Offshore Patrol Cutters (OPC), USCG Medium Endurance Cutters (WMEC), Amphibious Command Ships (LCC), MK VI Patrol Boats and land based training/test units. The gun mounts provide an anti-surface warfare and anti-air warfare capability for outfitted ships. Funds procure ORDALT kits, and provide ILS support and production engineering for system improvements that affect safety, reliability and maintainability.

[P5 / E5011 MAJOR CALIBER GUN MODS]: The 5-Inch MK45 MOD Gun Mounts are automated, lightweight, single-barrel gun mounts that provide an anti-surface warfare, anti-air warfare, and naval surface fire support capability for outfitted ships. The MK45 is installed on CG47 and DDG51 Class surface ships and land based training/test units. Funds procure ORDALTs kits, and provide ILS support and production engineering for system improvements that affect safety, reliability and maintainability.

*Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:
 FY 2020 E5002 MEDIUM CALIBER GUN MODS 2.1.1 increase provides additional engineering services for increased number of in-service guns.
 MK38 Machine Gun System kits will continue procurement of MK38 MOD 3 configuration with multiple capability upgrades: 7.62mm coaxially mounted machine gun, improved Electro-Optical Infrared Sensor (EOIR) for target identification, improved main computer unit, and aerial target detection/tracking/engagement capability. These capabilities will improve ship-based solutions for close range Fast Attack Craft/Fast In-shore Attack Craft (FAC/FIAC) Counter-Swarm and Counter Unmanned Aerial Systems (C-UAS).
 Installations for large deck include aircraft carrier (nuclear propulsion) (CVN) installations, submarine tenders (AS), Landing Helicopter Assault Ships (LHA), and Landing Helicopter Dock Ships (LHD). CVN installation costs are much higher than the amphibious ships previously executed (longer cable runs, larger sponsons, and floating crane requirements). Unit costs for installation in FY19-FY24 are based on actuals per installation on CVNs in FY18.
 FY 2020 E5006 MINOR CALIBER GUN MODS 4.1.3 increase in Gun Kits ILS/Test/Production increase due to concurrent installations on CVN, AS, LHD, and LHA class ships, which increased production, installation and test support costs.
 FY 2020 E5006 MINOR CALIBER GUN MODS 4.1.8 increase in MK38 Upgrade Kit Install due to increased number of MK38 Coaxial Upgrade Kits being installed in FY 2020.
 FY 2020 E5006 MINOR CALIBER GUN MODS 4.1.10 increase in MK38 backfit kit due to establishment for MK 38 Mod 3 ORDALT to upgrade deployed systems.
 FY 2020 E5006 MINOR CALIBER GUN MODS 4.1.13 increase due to additional LPD installations and installation requirements, which vary from ship to ship. In FY20 program will install 2 kits each aboard 11 LPD class ships (22 kits total).
 FY 2020 E5011 MAJOR CALIBER GUN MODS 9.1.1 increase is due to Ordnance Alteration requirements to include required non-recurring engineering, procurement, logistics and installation requirements to support Major Caliber Gun Mounts in the Fleet.

Remarks:
[Hardware] FY 2020 E5011 MAJOR CALIBER GUN MODS 9.1.1 increase is due to in Ordnance Alteration requirements to include required non-recurring engineering, procurement, logistics and installation requirements to support Major Caliber Gun Mounts in the Fleet.

- Footnotes:**
- (1) FY 2020 E5002 MEDIUM CALIBER GUN MODS 2.1.1 increase provides additional engineering services for increased number of in-service guns.
 - (2) FY 2020 E5006 MINOR CALIBER GUN MODS 4.1.3 increase in Gun Kits ILS/Test/Production increase due to concurrent installations on CVN and AS class ships, which increased production, installation and test support costs.
 - (3) FY 2020 increase in MK38 Upgrade Kit Install due to increased number of MK38 Coaxial Upgrade Kits being installed in FY 2020.
 - (4) FY 2020 E5006 MINOR CALIBER GUN MODS 4.1.10 increase in MK38 backfit kit due to establishment for MK 38 Mod 3 ORDALT to upgrade deployed systems.
 - (5) FY 2020 increase due to additional LPD installations and installation requirements, which vary from ship to ship. In FY20 program will install 2 kits each aboard 11 LPD class ships (22 kits total).

Description:

Minor Caliber Gun Mounts (MK38 MOD or MK46 MOD) are installed on AS, CVN, CG, DDG, LCS, LSD, LHA, LHD, PC, USCG FRC, USCG OPC, USCG WMEC, LCC, MK VI Patrol Boats and land based training/test units. The gun mounts provide an anti-surface warfare and anti-air warfare capability for outfitted ships. Funds procure ORDALTs kits, and provide ILS support and production engineering for system improvements that affect safety, reliability and maintainability.

[MINOR CAL. GUN MK38 GUN KITS (Surface Warfare) Standard]

Footnotes:
 (6) MK38 Machine Gun System kits will continue procurement of MK38 MOD 3 configuration with multiple capability upgrades: 7.62mm coaxially mounted machine gun, improved Electro-Optical Infrared Sensor (EOIR) for target identification, improved main computer unit, and aerial target detection/tracking/engagement capability. These capabilities will improve ship-based solutions for close range Fast Attack Craft/Fast In-shore Attack Craft (FAC/FIAC) Counter-Swarm and Counter Unmanned Aerial Systems (C-UAS). FY 2020 increase for 6 Surface Warfare Large Deck installations. Installations for large deck include CVN installations. CVN installation costs are much higher than the amphibious ships previously executed (longer cable runs, larger spousons, and floating crane requirements).

Description:

FY 2020 funding totals include \$0.0M for Base and \$14.585M for Overseas Contingency Operations (OCO); of which \$14.585M and 120 quantity is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

The Surface Warfare (SUW) Mission Package (MP) increases firepower and offensive/defensive capabilities against large numbers of highly maneuverable, fast, small craft threats, giving Littoral Combat Ship (LCS) the ability to protect the sea lanes and move a force quickly through a choke point or other strategic waterway. With the SUW MP embarked, LCS has enhanced detection and engagement capability against enemy small craft and similar littoral surface threats.

Other Related Budgets: BLIs: OPN 1603 LCS SUW Mission Modules, RDT&E 0603596N LCS Mission Modules

[P5 / Longbow Hellfire Missile]: The Longbow Hellfire missile is a fire and forget, millimeter-wave seeker missile for autonomous engagement. It has a 12.39 lb warhead, a single stage motor and a 6-8 km range when vertically launched. The Navy procures replacement in kind missiles from the Army inventory, completes shipboard modifications and certifications to deliver to the Fleet.

[P5 / Consulting Services]: Provides program management support, engineering and technical support, studies, analysis and evaluation on mission module systems.

*Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:
 Increased funding in FY 2020 supports the increased procurement of Longbow Hellfire missiles, which will support LCS SUW Division Deployments in FY 2021 and FY 2022 and maintain/build to the Navy inventory objective of 684 missiles.

Description:

Modernized CG47 Class Ships operate independently, or as units of Carrier Strike Groups, and Surface Action Groups, in support of underway replenishment groups and Marine Amphibious Task Forces in multitreat environments that include air, surface, and subsurface threats. These ships respond to low intensity conflict/Coastal and Littoral Offshore Warfare scenarios, joint missions, as well as open ocean conflicts, providing and augmenting power projection and forward presence. In addition, these ships conduct air dominance, land attack, and force protection missions. The Cruiser Modernization warfighting improvements extend the CG47 Class Ships capabilities against projected threats well into the 21st century.

Description:

FY 2020 funding totals include \$0.0M for Base and \$7.16M for Overseas Contingency Operations (OCO); of which \$7.16M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

Airborne Mine Countermeasures (AMCM) Equipment is currently used by MH-53E helicopters to counter the threat of sea mines. The MH-60S helicopter will be adapted for the AMCM mission in support of the development of an Organic Fleet AMCM program. The equipment is divided into three categories -- minesweeping, minehunting, and mine neutralization. (1) Minesweeping is performed by mechanical or influence sweeps. In mechanical sweeping, the mine mooring is severed by the sweep gear allowing the mine to float to the surface where it is destroyed. In influence sweeping, a magnetic or acoustic field, which simulates the magnetic/acoustic signature of a ship, is introduced into the water. This field causes the mine mechanism to actuate. (2) In mine hunting, the objective is to locate, identify, and classify mine like objects (usually by means of high resolution sonar). (3) Finally, in mine neutralization, previously identified/classified mine like objects are reacquired and neutralized using explosive devices.

[P5 / ARCHERFISH Neutralizer]: AN/ASQ-235 - Airborne Mine Neutralization System (AMNS) AMNS will provide the MH-60S helicopter with the capability to neutralize bottom and moored mines using an expendable mine neutralization device. The AMNS was tested on the MH-53E helicopter to prove the neutralization effectiveness. The system will be deployed from the MH-60S helicopter as part of the Littoral Combat Ship (LCS) Mine Countermeasure (MCM) Mission Package. This capability will be of critical importance in littoral zones, confined straits, choke points, and the Amphibious Objective Area (AOA). AMNS procurements are funded with OPN for the AMNS combat system and WPN for the AMNS Archerfish neutralizer.

[P5 - 2 / SEAFOX Neutralizer]: SEAFOX neutralizers are used from the AN/ASQ-232, Airborne Mine Neutralization System - SEAFOX (AMNS-SF), the AN/SLQ-60, Surface Mine Neutralization System - SEAFOX (SMNS-SF), and the SEAFOX Portable Mine Neutralization System (PMNS). Airborne combat systems are deployed from the MH-53E SEA DRAGON helicopters. Surface combat systems are deployed from the MCM-1 Avenger Class ships. The portable (PMNS) combat system is deployed from a Rigid Hull Inflatable Boat (RHIB).

*Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:
 FY 2020 funding supports the baseline program to procure the neutralization capability for the current in service mission (SEAFOX - MH-53E helicopters and MCM Class Ships) and the neutralization capability for the organic mission (Archerfish MH-60S and LCS). This capability is currently deployed around the world to meet the current operational mine warfare mission demand for these systems and to maintain the total munitions requirement inventory.

 The FY 2020 funding request was reduced by \$4.857 million to account for the availability of prior year execution balances.

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

FY 2020 funding totals include \$0.0M for Base and \$126.138M for Overseas Contingency Operations (OCO); of which \$126.138M is realigned as part of the OCO for Base Requirements. FY 2020 OCO for Base Requirements is OCO funding for base budget requirements in support of the National Defense Strategy. The Budget requests these funds in OCO to comply with the base budget defense caps included in the Budget Control Act of 2011.

The Weapons Procurement, Navy (WPN-6) budget line item is made up of three sub budget line items (SUBLI); SUBLI (20) Initial Spares, SUBLI (30) Outfitting Spares, and SUBLI (90) Vender Direct spares. Together they provide all Weapons Procurement, Navy (WPN-6) Spares funding in support of Navy surface ordnance, which consists of all guns, associated equipment (hoists, shields, etc.), and related material support necessary to support fleet readiness capabilities. Funding also provides for Initial and Vendor Direct spares, during the maintenance cycle, to support Anti-Submarine Warfare weapons and support equipment. Initial spares are components, assemblies, and sub-assemblies that are provided and stocked on active ships, shore sites, and expeditionary units as spare parts for newly fielded weapon systems. Outfitting spares are Spare parts that the Navy Supply System has bought-in to respond to meet fleet requisitions for newly installed/modernized systems. Spares funding is required for the initial outfitting and repair of missiles or components that fail or are damaged while in the Fleet, and for expendable items, such as guided missiles and non-recoverable target drones. For recoverable target drones, additional spares and repair parts are required to repair damage incurred while in flight, damage incurred during recovery operations, and for control and telemetry equipment.

This budget line item also provides for Initial and Vendor Direct spares, during the in-service maintenance cycle, to support organic and commercial depot repair/refurbishment activities for NAVAIR managed air-launched weapons and associated equipment. Air launched weapons consist of anti-ship, anti-radar, anti-armor, air-to-air, and air-to-surface weapons including Advanced Anti-Radiation Guided Missile (AARGM), AARGM-ER, High Speed Anti-Radiation Missile (HARM), Harpoon (air/surface/sub-surface), Hellfire, Joint Standoff Weapons (JSOW), Air-to-Surface Guided Missiles (AGM-65), Long Range Anti-Ship Missile (LRASM), Airborne Intercept Missile (AIM-7, AIM-9, AIM-120), Standard Land Attack Missiles (SLAM-ER), Small Diameter Bomb Increment (SDB II), Joint Air-to-Ground Missiles (JAGM), Miniature Air Launched Decoy (MALD) and other air-launched guided weapons that fall under special access program control.

Title represents the P-18 Title for Spares.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:
The FY2020 funding request was reduced by \$14.692 million to account for the availability of prior year execution balances.

Initial Spares
FY 2020 Program Increase Justifications:

2206/ Increase funding in Advanced Medium Range Air-to-Air Missile (AMRAAM) initial spares is to procure the additional requirement of 20 CATM Guidance Sections.

2209/ Increase funding in Sidewinder initial spares is due to an increase in depot repairs since AIM-9X-2 fielding, resulting in an increase in spares required.

2280/ Increase funding in Aerial Targets initial spares is to support the BQM-177A target production buy.

2290/ Other Missile Support Equipment - Increase provides for MK41 vertical launch system, to support missile launch requirements.

2327/ Increase funding in HARM Mods initial spares is to procure guidance and control sections spares for forward positioning to reduce turnaround time for repairs at the depot. This is necessary due to the limited end item quantities currently available to the Fleet.

4129/ Small Arms and Weapons - Increase supports Stabilized Small Arms Mount (SSAM) MK50 machine guns.

Replenishment Spares
FY 2020 Program Increase Justifications:

2242/ Rolling Airframe Missile (RAM) - Increase supports section and component level spares for the growing population of Block 2 missiles. Combat useable RAM assets are projected to drop 43% over FYDP without spares.

9203/ Spares for NAVAIR - Increase in replenishment spares requirement between FY 2019 and FY 2020 is based on life-cycle modeling that indicates an 18.8% increase in missile demand for AIM-9X. This demand is driven by the end of remaining AIM-9X Block I warranties, coupled with the increase of fielded Block II missiles based on existing Program of Record (POR) quantities. Additionally, the missile demand increase of 18.8% from FY 2019 to FY 2020 is due to increased flight hours and simultaneously experiencing higher than anticipated failure rates. AMRAAM requirements increased due to higher unit costs for the parts being procured. JSOW requirements increased due to a significant increase in demand. LRASM had a significant increase in demand for three specific parts. Increased funding in Spares for NAVAIR will decrease backlogged repair pipeline as well as fielding more assets to keep pace with operational requirements. These funds will also enable platforms to avoid depot interruptions and potential startup costs.

ID Code (A=Service Ready, B=Not Service Ready): A	Program Elements for Code B Items: N/A	Other Related Program Elements: N/A
Line Item MDAP/MAIS Code: N/A		
4217/ Gun Mount Mods - Increased funding in Gun Mount Mods spares to support MK-46 Gun Weapons Systems (GWS), MK-38 (MOD3 MGS), MK-45, MK-110, and MK75/76 MM and fielding more assets to keep pace with operational requirements. Vendor direct spares requirement is increasing due to support of Shipbuilding & Conversion, Navy (SCN) procured guns for Littoral Combat Systems (LCS) and Destroyer Designated Guided (DDG) 1000.
